WELCOME TO THE ODYSSEA FINAL CONFERENCE

ODYSSEA Final Conference

Nov 3, 2021 09:00-16:15 CET

Georgios Sylaios

Democritus University of Thrace

gsylaios@env.duth.gr

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 727277

Scope

The purpose of this conference is to present the final results to key target audiences: partners, the scientific community, marine-based industry (including SMEs), policymakers, public authorities, media, consumer organizations and the general public.

The conference has been arranged into 6 specific areas of focus:

1. Capacity-building around the Mediterranean, Europe, Israel and North Africa.
2. Marinomica – the data visualisation platform & data harmonisation.
3. Development of Marinomica products and services.
4. Observatories – the new Med observatories.
5. Contribution to Policy-making.
6. Impacts and the future
 1. Blue growth
 2. Continued operation of Marinomica
 3. Continued operation of the Observatories
 4. EcoScope – fisheries management
 5. Iliad – The EU's digital twin of the ocean

Agenda

09:00 – 09:45 (CET) - Professor Georgios Sylaios (DUTH), Project Coordinator

Welcome and introduction to project achievements

09:45 – 10:30 (CET) - Daniel Cebrian (SPA-RAC)

Capacity-building around the Mediterranean, Europe, Israel and North Africa

10:30 – 10:45 (CET) **Break**

10:45 – 11:30 (CET) - Simon Keeble (Blue Lobster) & Nicolas Grainier (CLS)

Marinomica – the data visualisation platform & data harmonisation

11:30 – 12:30 (CET) - Lorinc Meszaros and Ghada El Serafy (Deltares)

Development of Marinomica products and services

12:30 – 13:30 (CET) **Break**

13:30 – 14:30 (CET) - Hussein Nibani (AGIR)

Observatories – the new Med observatories

14:30 – 14:45 (CET) **Break**

14:45 – 15:15 (CET) - Claire Dufau (CLS) and Laura Friedrich (UNEP-WCMC)

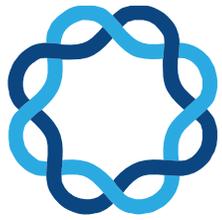

End-User Services and Contribution to policy processes

15:15 – 15:45 (CET) - Simon van Dam (Agora)

Impacts and the future (Blue growth, Continued operation of Marinomica, Continued operation of the Observatories, EcoScope – fisheries management, Iliad – The EU's digital twin of the ocean)

15:45 -16:15 (CET) - **Discussion and feedback**

16:15 (CET) – **Close** - Professor Georgios Sylaios (DUTH), Project Coordinator & Simon van Dam (Agora)

AN OVERVIEW OF THE ODYSSEA PROJECT

ACTIVITIES, ACHIEVEMENTS, CHALLENGES

ODYSSEA Final Conference

Nov 3, 2021 09:00-16:15 CET

Georgios Sylaios

Democritus University of Thrace

gsylaios@env.duth.gr

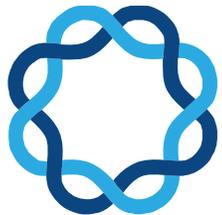

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 727277

4 ½ year earlier...

ODYSSEA

ODYSSEA

**The ODYSSEA Consortium was
awarded an EU Grant for a
proposal submitted to Call**

**BG-12-2016: Towards an integrated Mediterranean Sea
Observing System**

Basic Call Requirements

Develop a new Mediterranean Sea Observing Platform to

- ✓ describe the functions of vulnerable marine ecosystems
- ✓ support biodiversity conservation
- ✓ forecast and manage risks and emergencies
- ✓ place the above within the context of sea-related activities and economic sectors

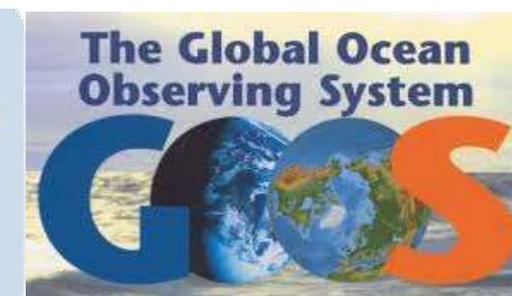

Basic Call Requirements

- The developed platform should **integrate information from existing platforms** and systems already in operation in the Med, as:

- ✓ EMODNet
- ✓ Copernicus
- ✓ GEOSS
- ✓ GOOS
- ✓ ESFRI

Information in these systems is fragmented and difficult to access

Basic Call Requirements

We need to conduct research and innovation activities **to address and fill in observational gaps** in the Med, in particular those related to the *in-situ* component of the observation system.

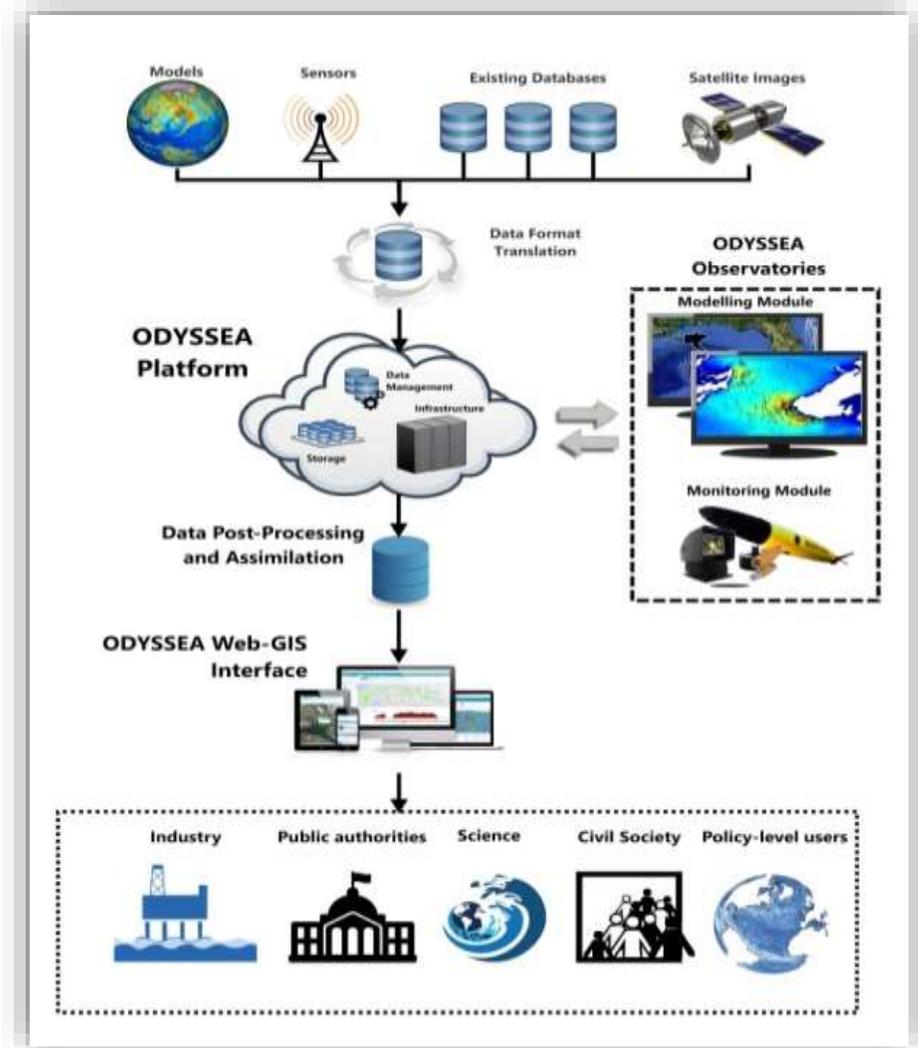

We need to

- ✓ Improve existing **in-situ operational systems**
- ✓ Expand towards **new ocean observation technologies**
- ✓ Integrate the **biological dimension** into sea observing systems
- ✓ To build **cost-effective in-situ systems**
- ✓ Utilize the information collected to **calibrate and validate models and satellites** (Sentinel, Earth Explorer)

ODYSSEA Conceptualization

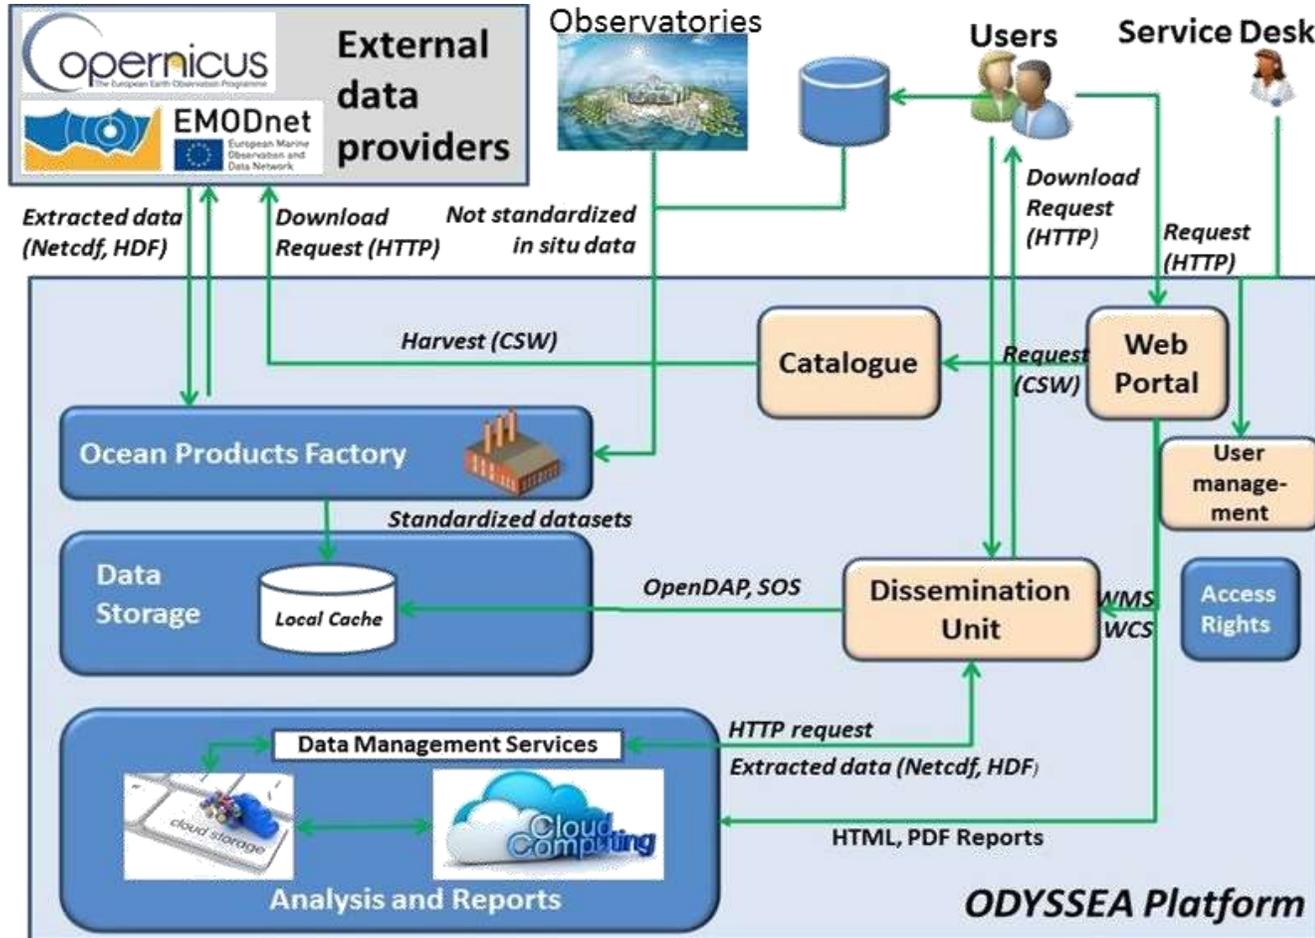

- ODYSSEA is a system bridging the gap between operational oceanography capacities and the need for information on marine conditions from the community of end-users.
- ODYSSEA's ambition is to develop an **interoperable, fully-integrated and cost-effective multiplatform network of observing and forecasting systems** across the Mediterranean basin, addressing both the open sea and the coastal zone.

ODYSSEA Conceptualization

ODYSSEA

Data Storage Component - Local storage for ODYSSEA OBS data, end-users uploaded data, and end-users ordered data, Data will be **standardized** through the OPF.

Catalogue

An interface for CSW-based catalogue services following OGC guidelines,

Users Management Component

Deals with user access to the platform

Dissemination Unit Component

Produce and supply data in common formats to platform front-ends and services,

OpenDAP for data in Grids, SOS for data for time-series and WMS-t for data in Maps, NetCDF, ODV, etc.

Gridded data - THREDDS and open source MOTU Components

In-situ data - Oceanotron Component

Ocean Products Factory Component

Providing new tailor-made sea products acting as an advanced data broker,

Data production **by selecting variables, space and time frame** from metadata products in the ODYSSEA catalogue,

Process data from Monitoring and Modelling Modules from each ODYSSEA OBS,

Offer new standardized and catalogued products

ODYSSEA's Central Objective

ODYSSEA is a user-centred project aiming to make Mediterranean marine data easily accessible and operational to multiple end-users, by

- harmonizing existing Earth Observing systems,
- upgrading operational oceanographic capacities,
- supporting EU policy implementation,
- improving interoperability in monitoring,
- fostering blue growth jobs creation, and
- opening participation to non-EU member states.

ODYSSEA Specific Objectives

1. Develop a platform to discover, integrate and process datasets obtained from an expanded range of existing observation platforms
2. Fill-in data gaps & increase spatial and temporal resolution by establishing ODYSSEA Observatories
3. Develop a prototype 'chain' of models providing data never previously reported
4. Expand existing operational monitoring systems capacity
5. Emphasize on biological datasets
6. Combine data to extract secondary indicators
7. Link indicators to EU policies
8. Involve end-users on platform design, data collection and day-to-day operations
9. Train and educate policy-makers and end-users on platform usage
10. Improve professional skills and competences - focus on Northern Africa capacity building

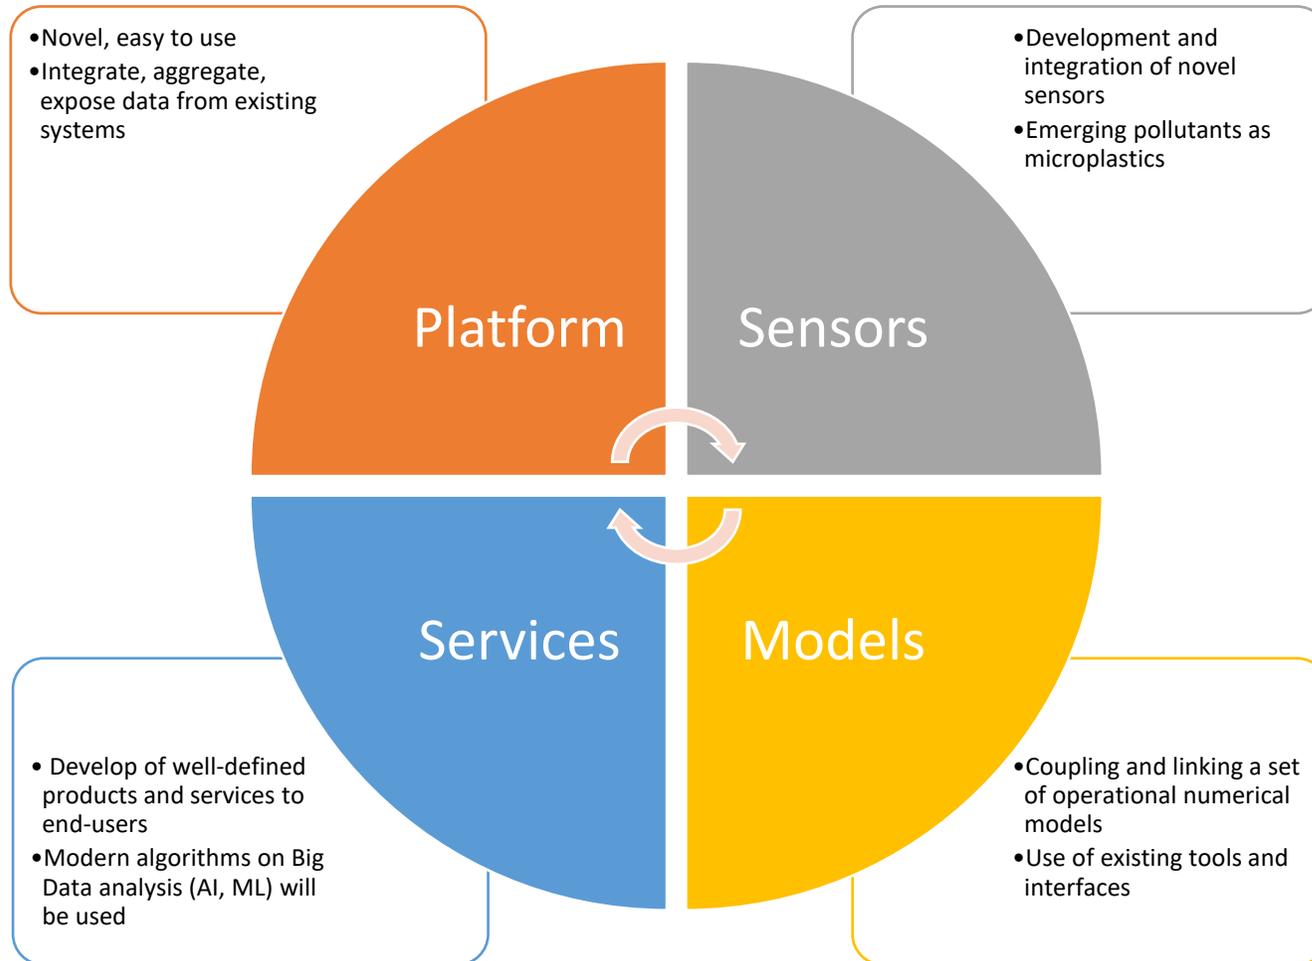

What is ODYSSEA

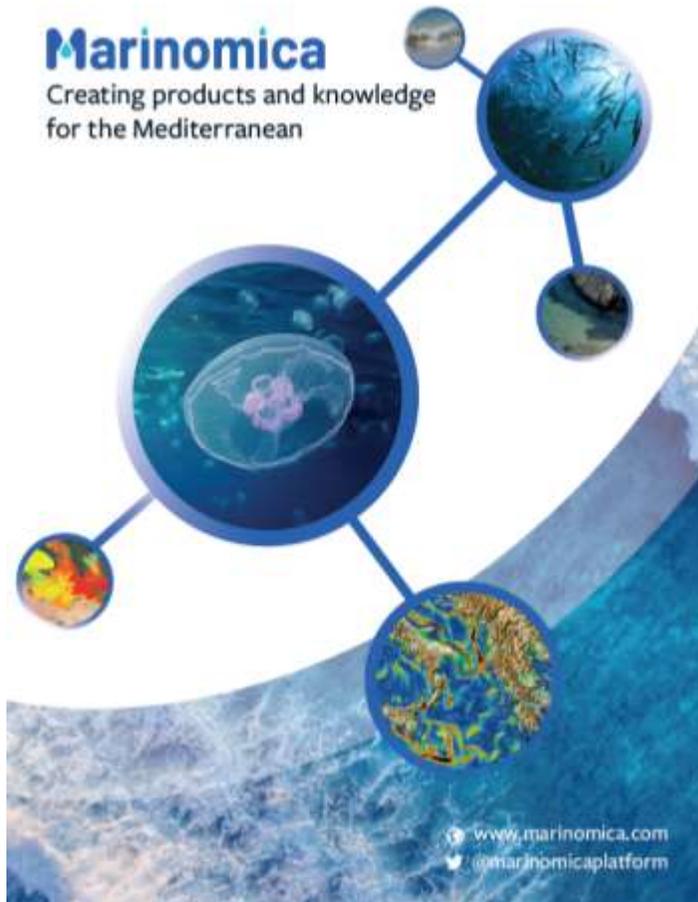

ODYSSEA is a Mediterranean-focused research project funded by EU Research and Innovation Program Horizon 2020

- 28 partners from 14 countries (6 non-EU)
- 8.398 Meuros budget
- 54 months duration
- Starting date 1st June 2017
- Ending date 30th November 2021
- 932 PMs in total
- 7 Advisory Board Members

ODYSSEA Components

Introducing “Marinomics”

Noun /mə'ri:n'nɒmɪks/

1. The science of decision making in the marine environment.
2. The branch of knowledge concerned with the production, consumption, and transfer of wealth in the marine environment.

Marinomics is a new multidisciplinary scientific topic adopting the novel approaches of Earth Big Data to provide Services within the concept of Blue Economy and Growth. Marinomics aims to improve decision-making and operations in the multitude of users operating at sea, protect the marine environment and support marine and maritime sustainable development.

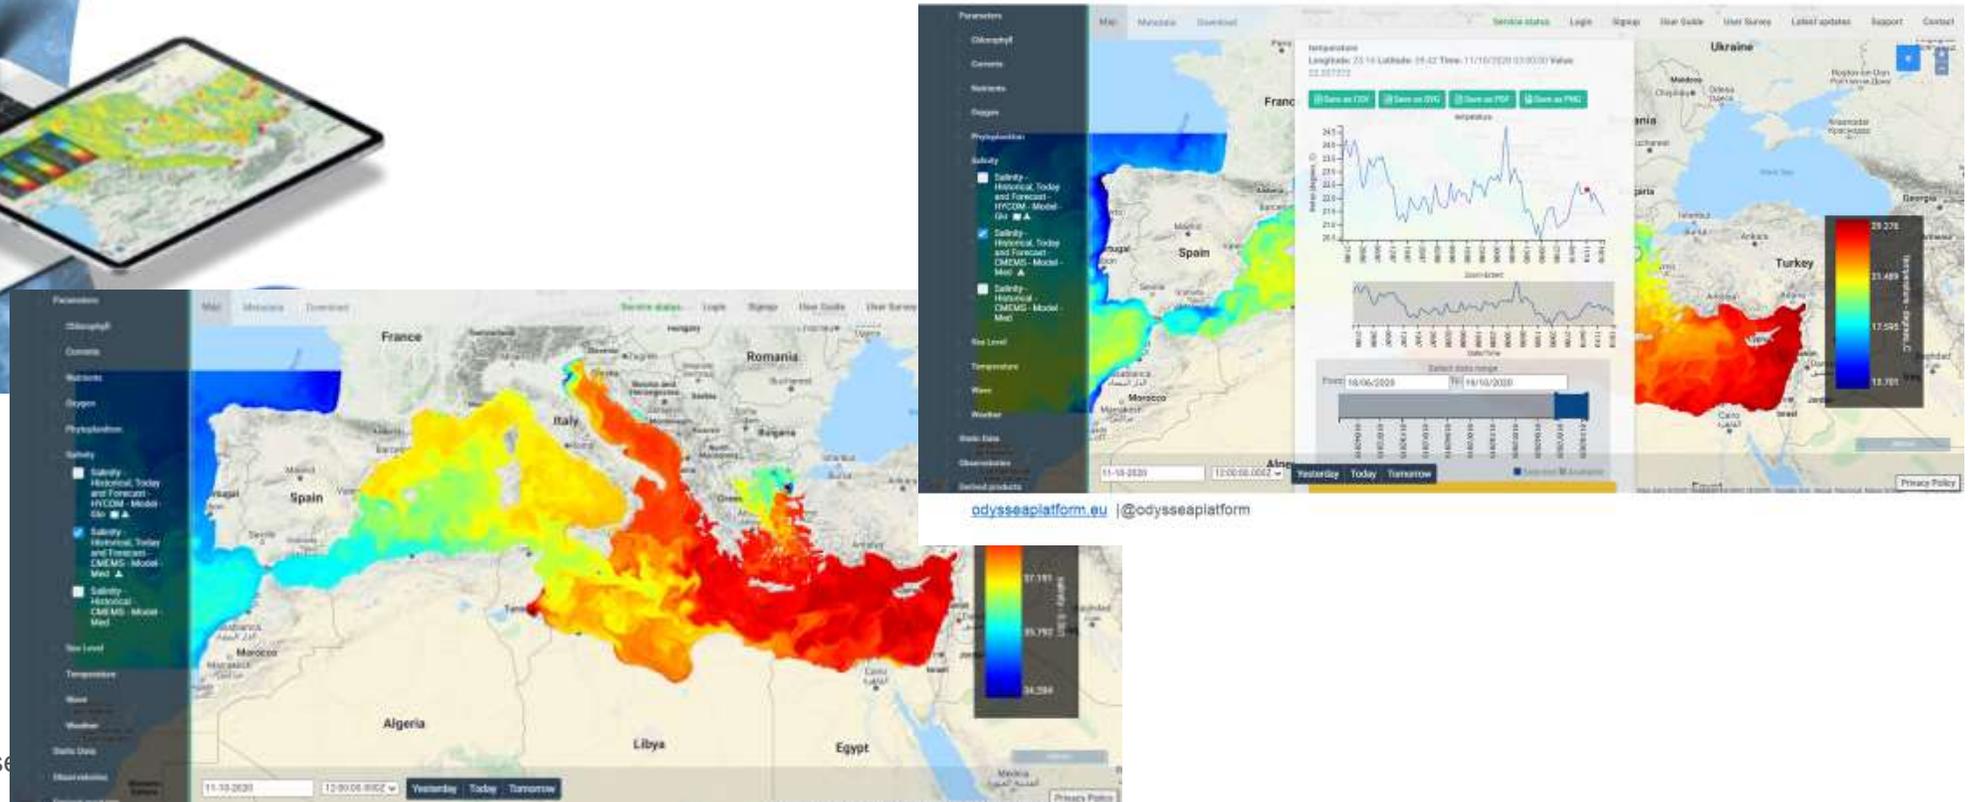

The Marinomica Platform

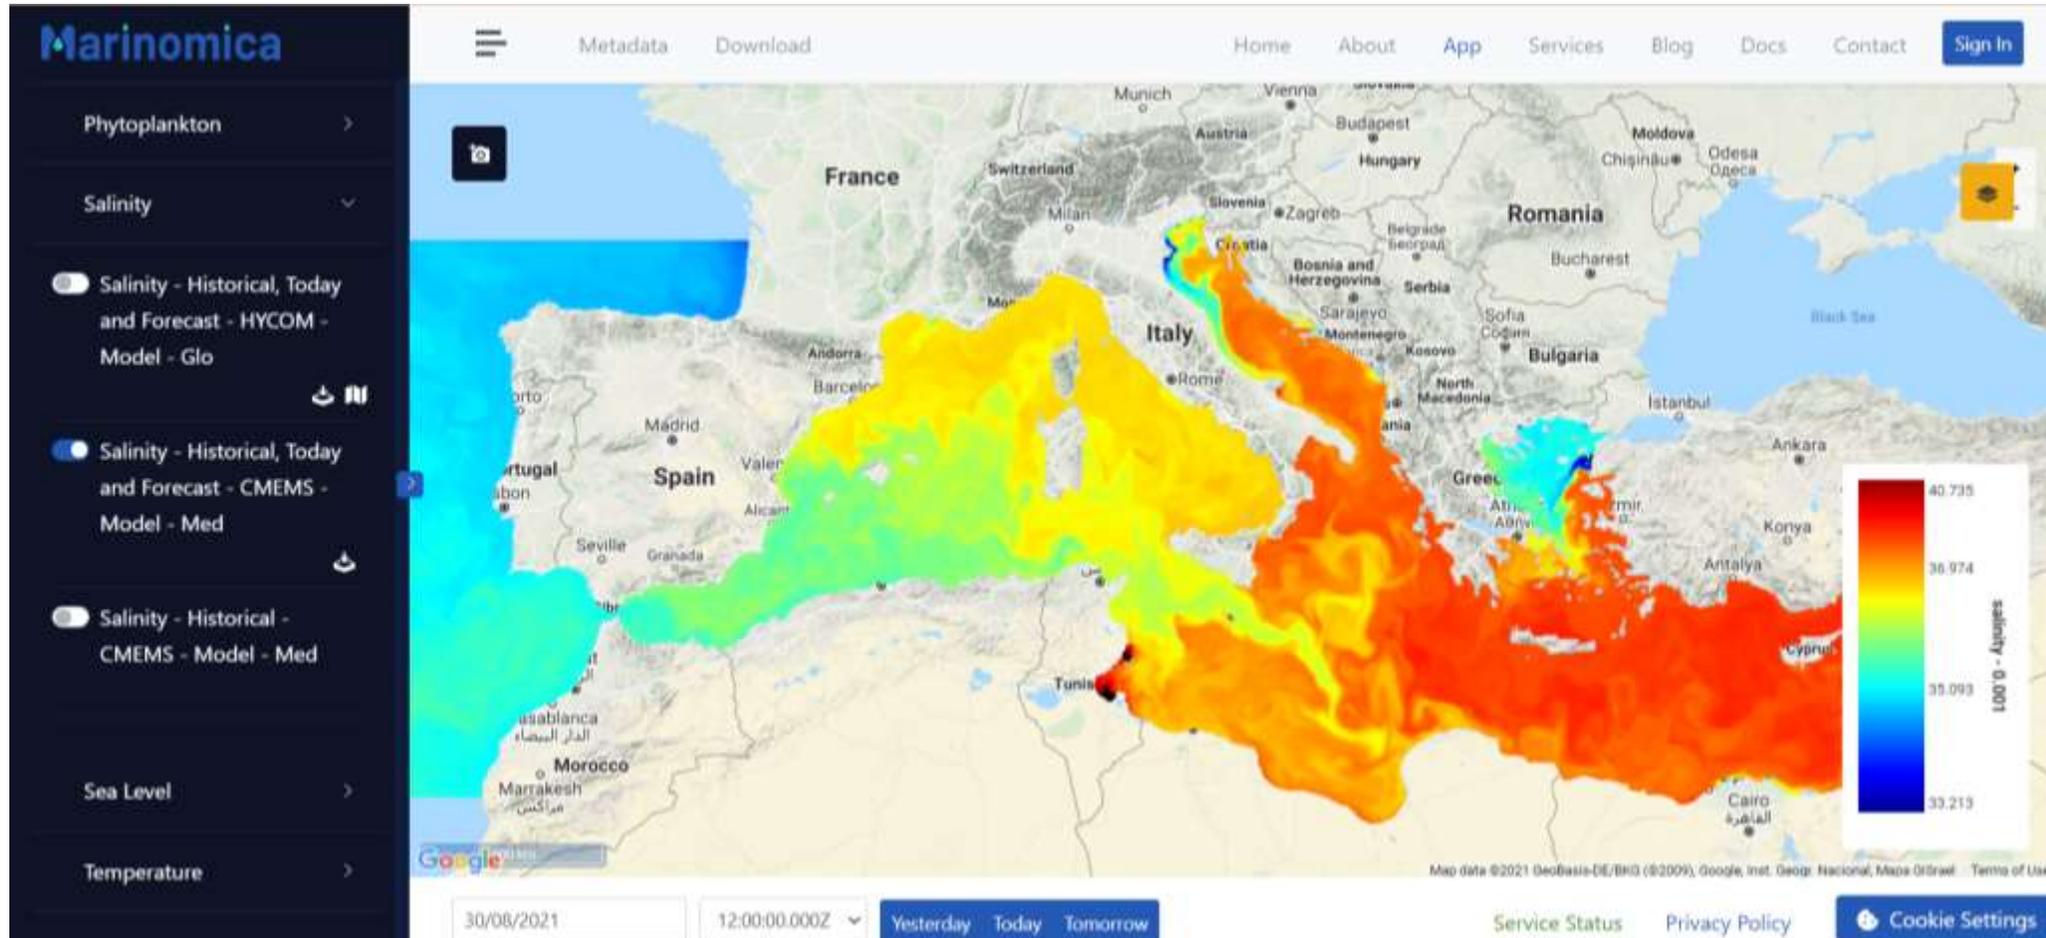

The Marinomica platform

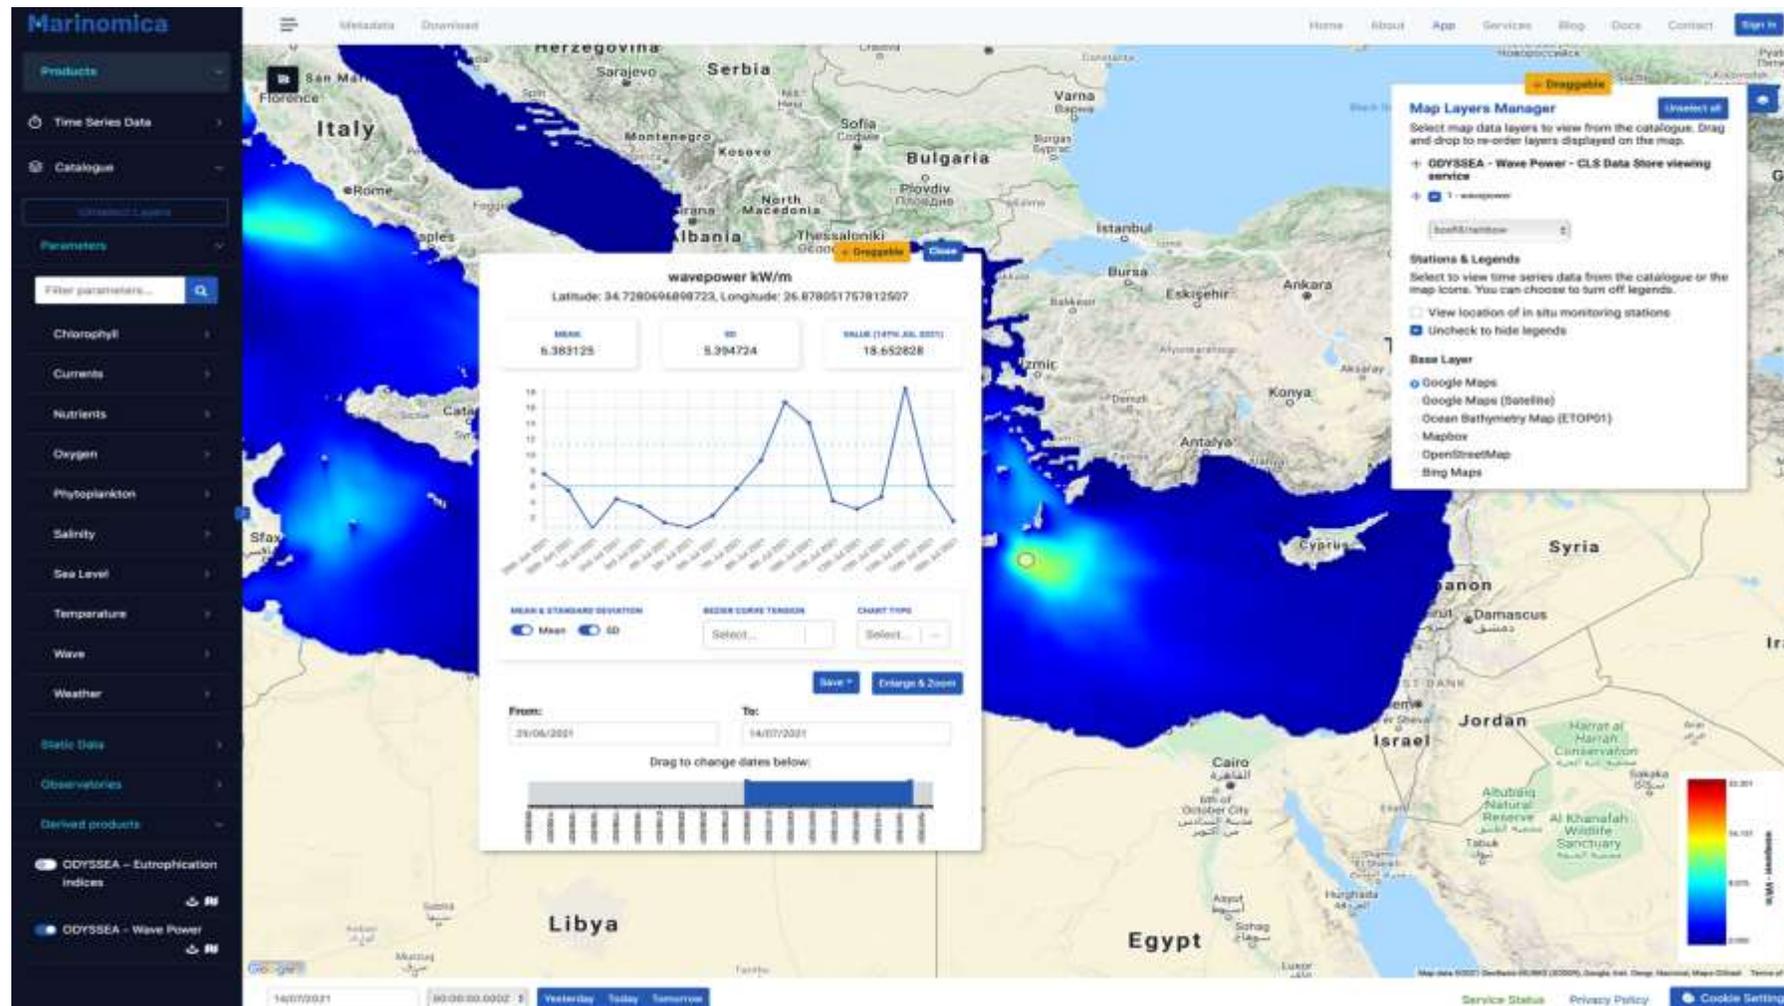

Surface Temperature

The Marinomica Platform

The Marinomica Platform

The Marinomica Data Centre

From Marinomica to the Digital Twin

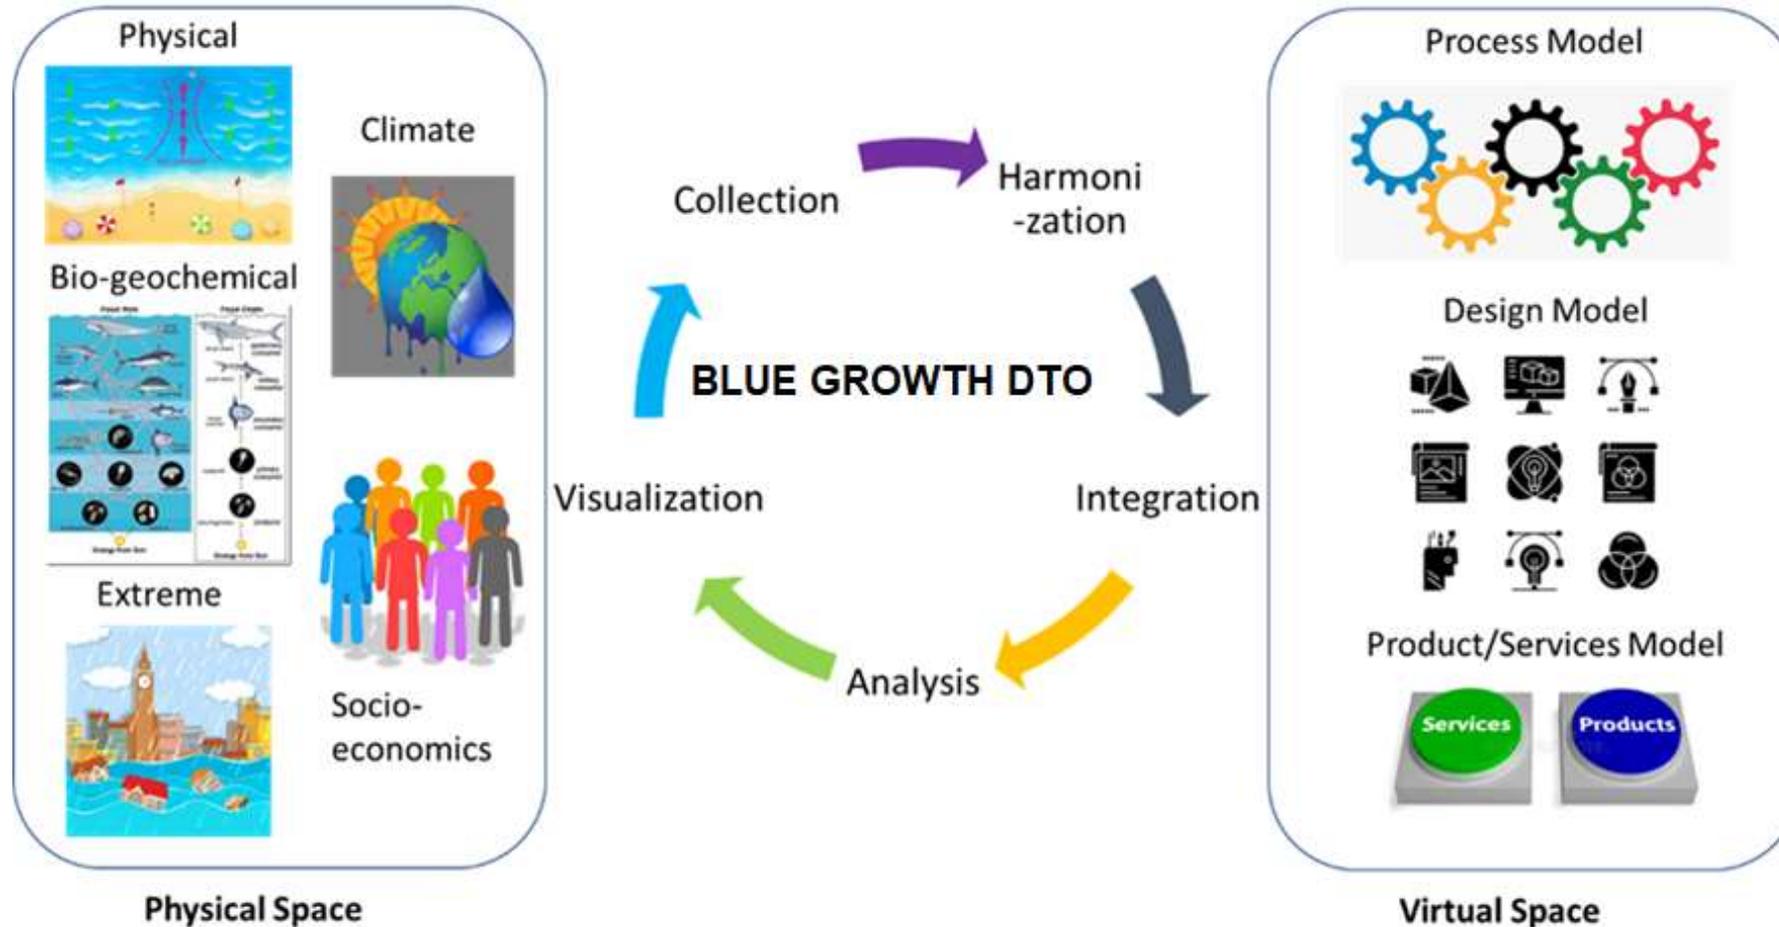

Utilize

- the “flood” of available digital data from different EO sources,
- modern computing infrastructure (IoT, social networks, Big Data, cloud computing)
- run advanced forecasting algorithms,
- explore spatio-temporal utilizing pattern recognition tools,

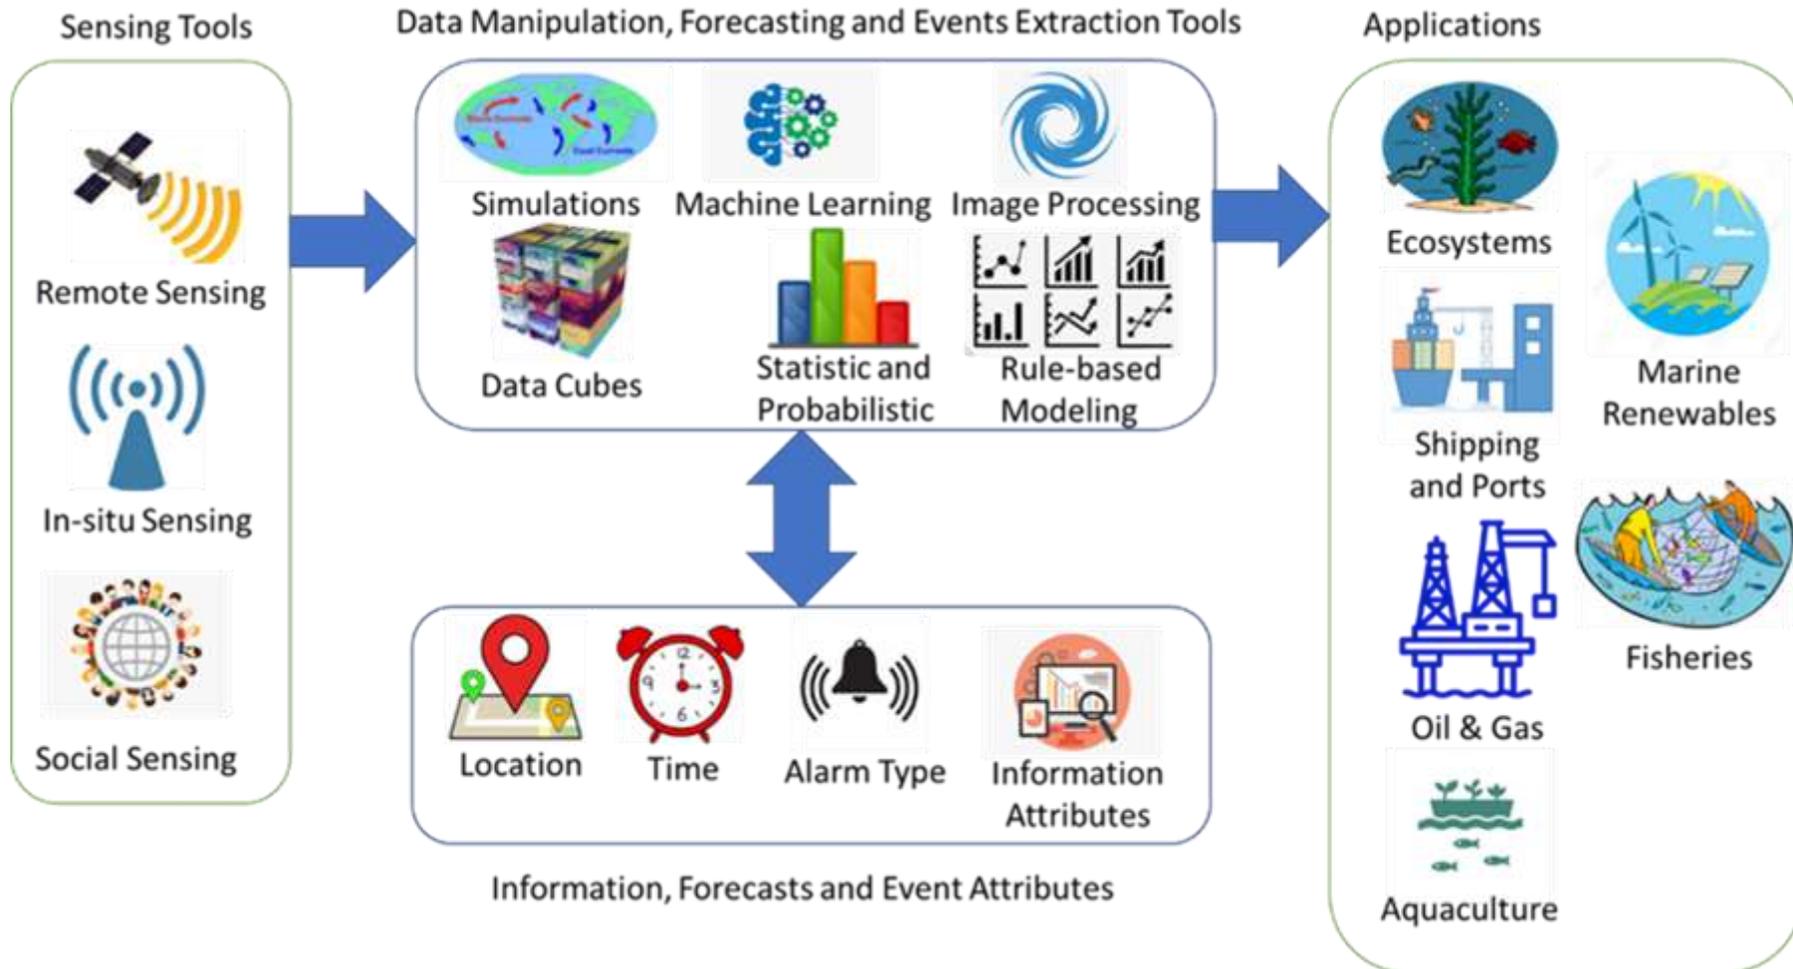

aiming to

- to address computationally all Earth Data challenges,
- predict extreme events
- produce RT/NRT digital replicas of the ocean
- support smart products and services design, thus improving lives, works and prosperity throughout the EU.

Blue Growth DTO

The Marinomica DTO

The Marinomica Platform

Present Datasets: CMEMS, HYCOM, AVISO+, CLS models, Sentinels, ECMWF, NOAA, EMODnet habitats

Upcoming Datasets: OneGeology, Fishbase, UNEP-WCMC, CORDEX CC, e-Hype

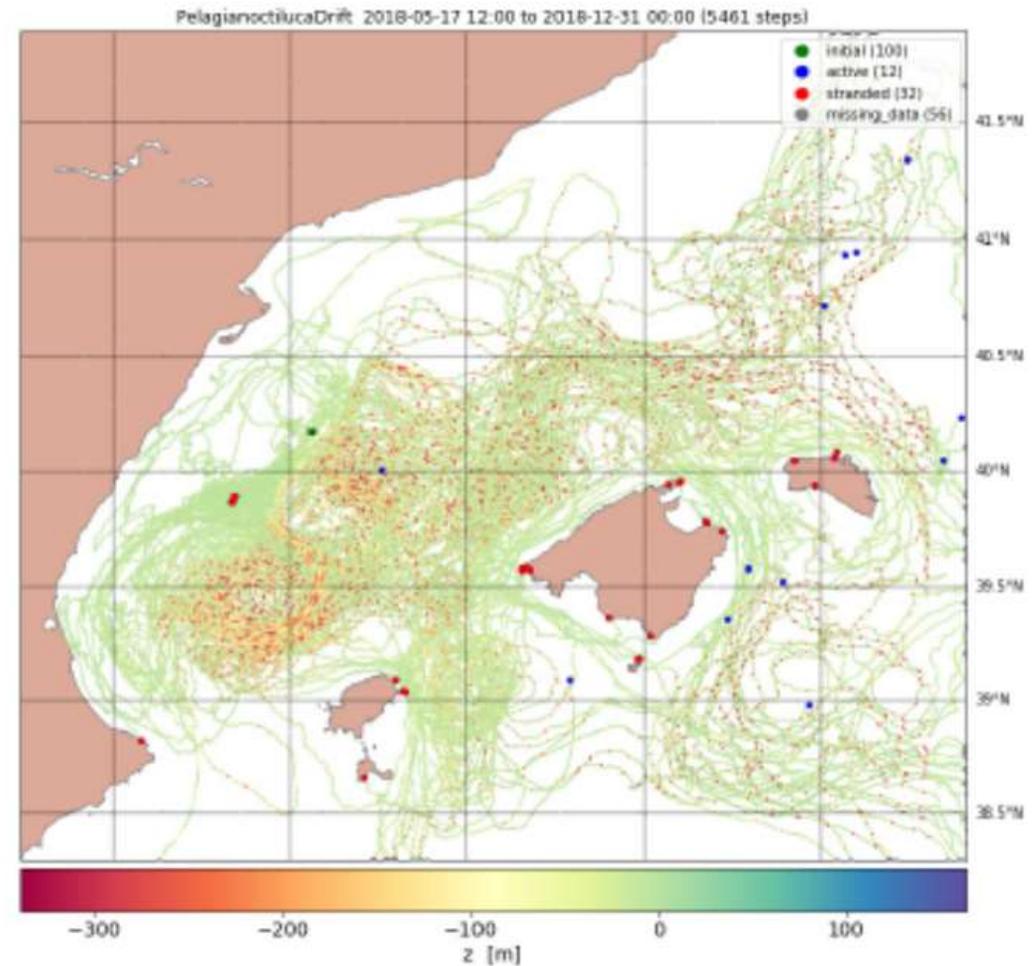

The Marinomica Services

ODYSSEA Pollution Services
Jellyfish Invasion

Creating products and knowledge for the Mediterranean

Nine ODYSSEA Observatories

Mapping User Needs

Table 4: Examples of potential use cases, for each of the 12 sectors considered

Sector	Use case (short) name and ID number	ODYSSEA Observatory	Extent of end-user engagement	Narrative
Fishing	#067 Fish nurse areas in Gökova	Gulf of Gökova	End-user engagement	<i>As a fisher, I need to know the location of nursery areas in the Gulf Gökova, especially for the endangered species</i>
Aquaculture	#011 Mussel farmers, Keramoti Bay, Kavala Gulf	North Aegean/Thracian Sea	End-user engagement	<i>Daily meteorological and oceanographic information provided to mussel farmers via social media, with explanation text in Greek</i>
Oil and gas	#016 Oil and gas extraction in Israel	Israeli Coast	End-user engagement	<i>Gas extraction companies and the Ministry of Energy need better meteorological and current information and forecasting for safe operations</i>
Renewable energy	#023 Offshore wind farm development	N/A	Existing example	<i>Offshore wind and wave farm operators and developers need wind and wave data to be able to plan their operations and developments</i>
Shipping	#029 Shipping routes, Greece/entire Mediterranean	North Aegean/Thracian Sea	Identified need	<i>Port authorities, cargo and cruise operators need forecast data to optimize shipping routes to enhance safety and reduce fuel consumption</i>
Other marine industries	#039 Data for marine mining	N/A	Existing example	<i>Marine mining operators receive texts with early warnings of poor weather conditions</i>
Coast guard operations	#032 Reach and rescue operations	N/A	Existing example	<i>Real-time, accurate spatial data on conditions informs decisions on where to employ reach and rescue resources</i>
Policy and governance	#045 National pollution and biodiversity monitoring, Israel	Israeli Coast	End-user engagement	<i>The ministry of environmental protection and the Israeli Oceanographic Institute need microplastic concentration data for national pollution monitoring programmes</i>
Environment and biodiversity management	#077 Reporting on EU Marine Directive Descriptor 2	Gulf of Gökova	End-user engagement	<i>As a national government employee, I need to know the impact of invasive species on ecosystem in Gökova MPA, for reporting under Descriptor 2 of the EU Marine Directive</i>

Building Customized Sensors

Surface system

Lander

The DEVELOGIC Landers and Surface Buoys, measuring:
T, S, DO, Turbidity, CDOM, Chl-a, MPS
Landers: + Waves, Currents, MPS

MPS pack

Deployments of Fixed Systems

Observatories	Surface	Lander
Thracian Sea	1	1
Gokova	1	
Arzew Bay/Stora Gulf		
Al-Hoceima	1	1
Israel	1	
Ghabes Gulf	1	
Nile ROFI		

Data collected by ODYSSEA are transferred to MonGOOS, CMEMS and EMODnet through INSITU-TAC.

Glider Missions in the Med

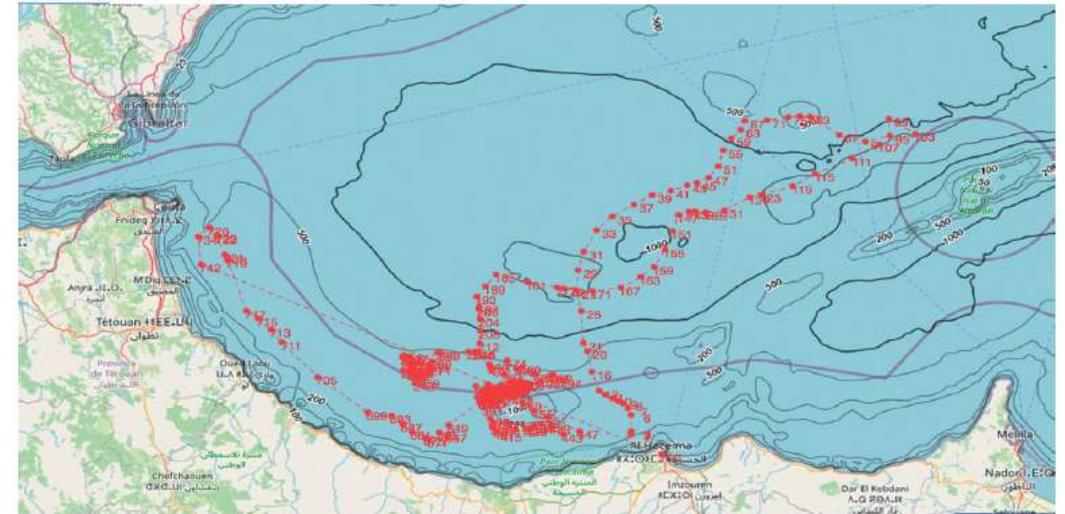

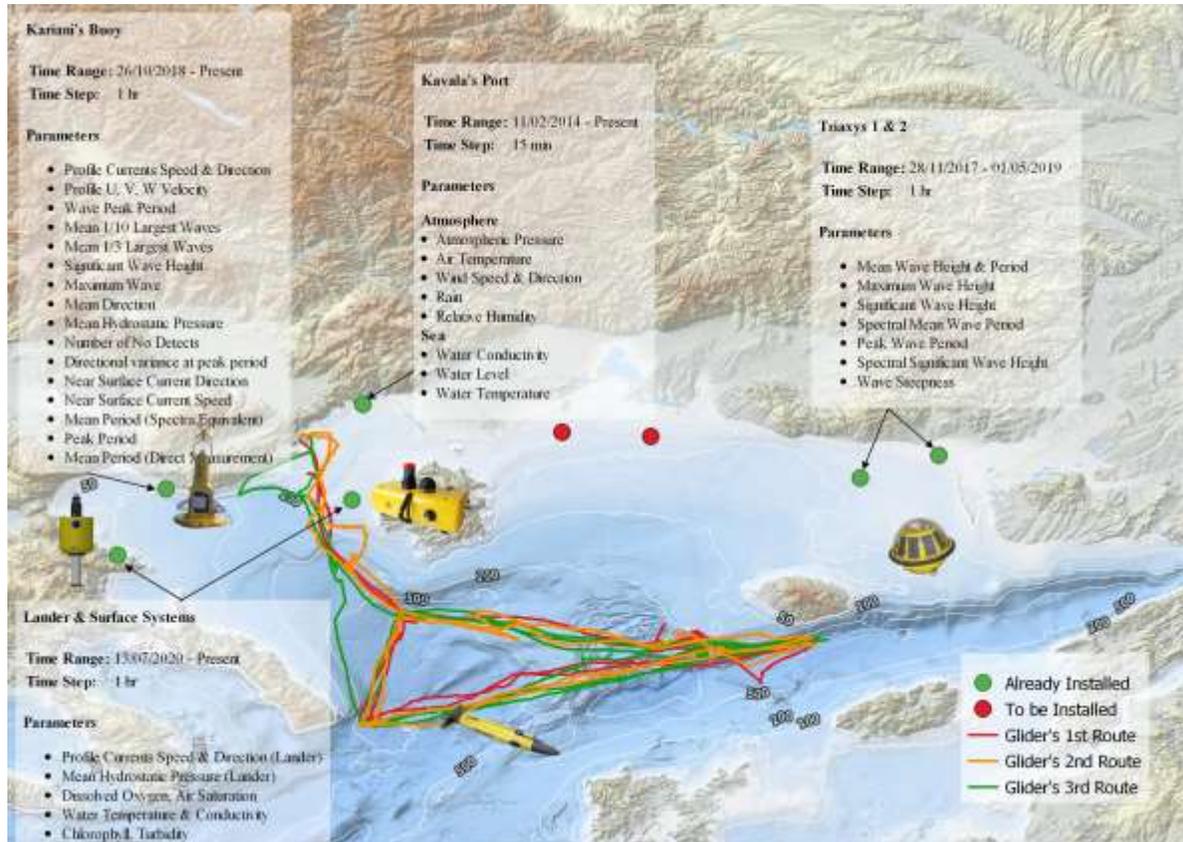

- 2 SEAEXPLORER GLIDERS
- 3 sensor payloads:
 - ❖ Payload 1
 - ✓ Temperature, salinity, pH, dissolved oxygen, chlorophyll-a, turbidity, CDOM
 - ❖ Payload 2
 - ✓ Passive Acoustic Monitoring (PAM)
 - ❖ Payload 3
 - ✓ Temperature, salinity, microplastics

Observatories	Glider Missions
Thracian Sea	3
Gokova	
Arzew Bay/Stora Gulf	
Al-Hoceima	2

Striped Dolphins

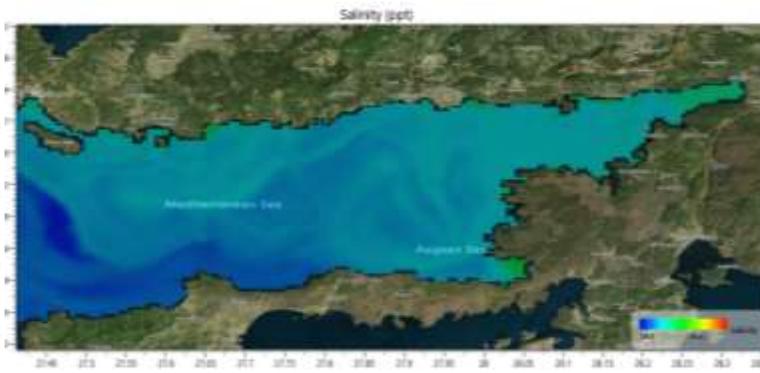

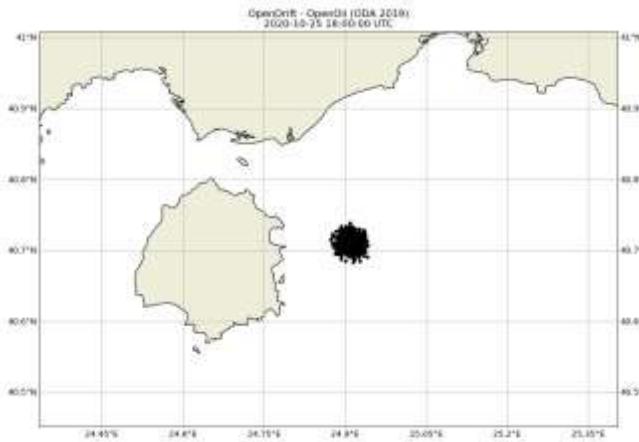

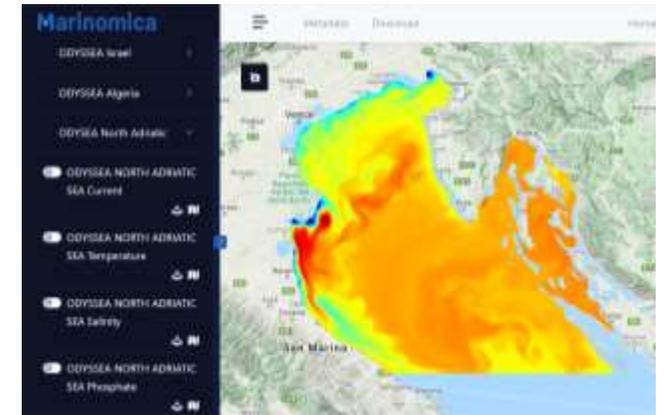

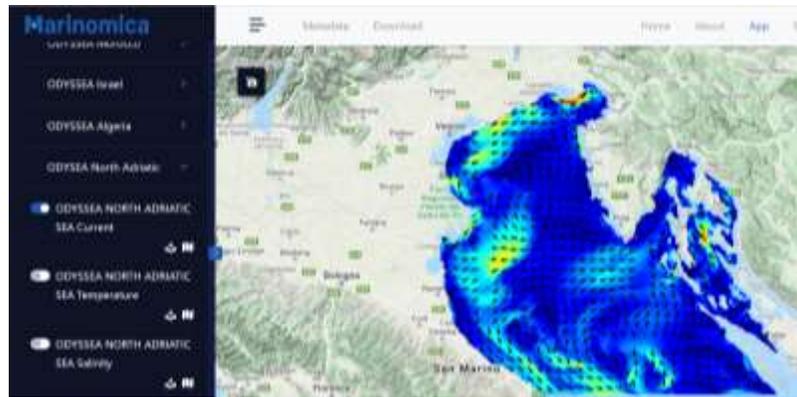

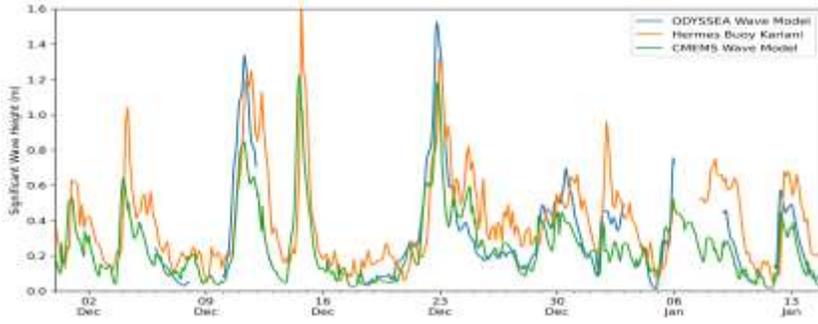

The Marinomica Downscaled Models

- ✓ A prototype 'chain' of operational models will be developed,
- ✓ Link models to existing databases,
- ✓ Provide short- and long-term prognostic results,
- ✓ Manage risks and emergencies in coastal and offshore areas,
- ✓ Meet the requirements of various end-user groups,

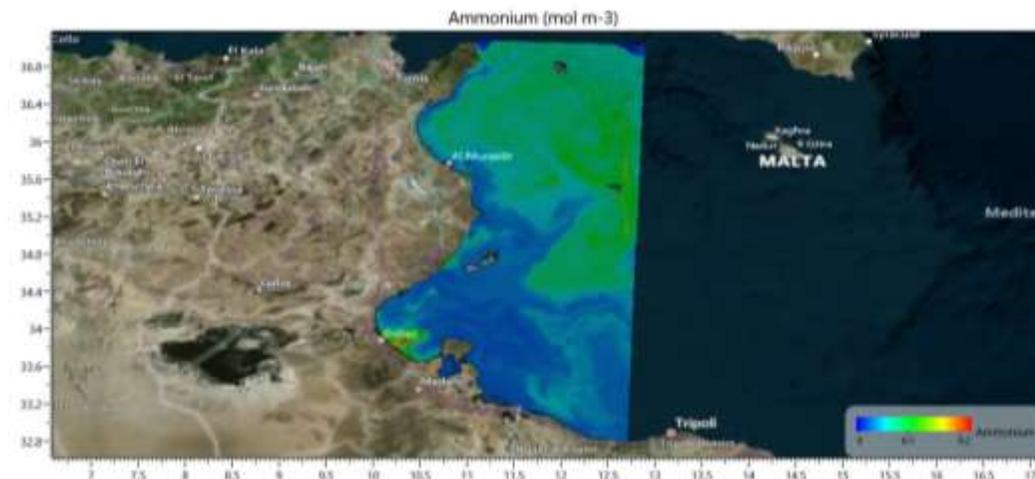

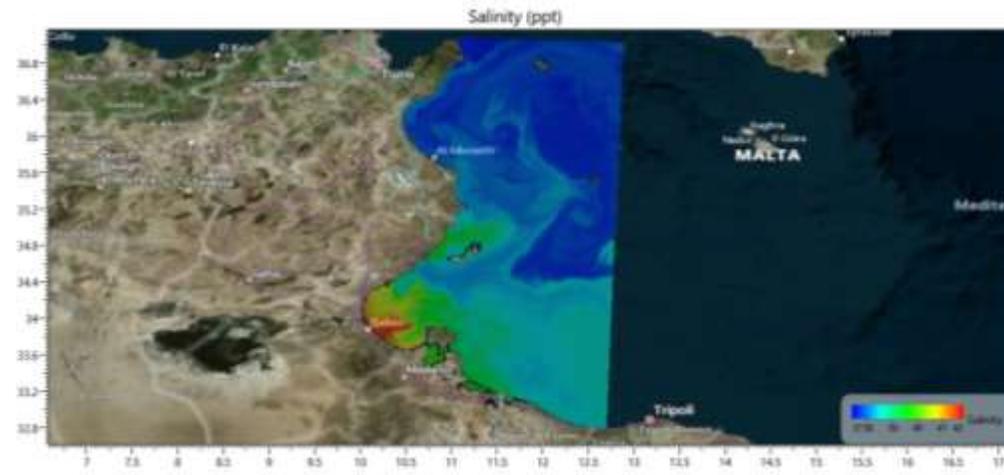

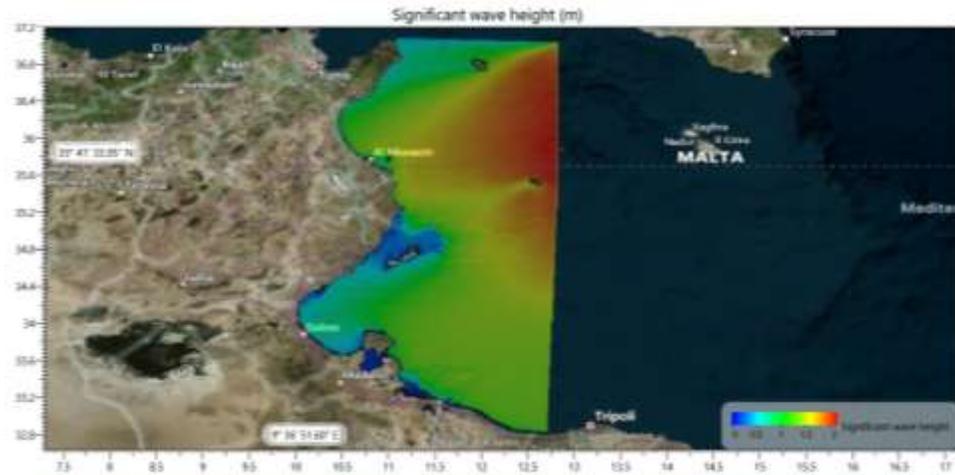

FEWS & Aquasafe: a) automatized data import, storage and pre-processing (from in-situ sensors, remote sensing, etc.); b) linking models to databases for initial and boundary conditions; c) scheduling of tasks to run the series of coupled numerical models; d) models calibration and validation; e) data assimilation, and f) post-processing modules results and transferring data to the Marinomica platform.

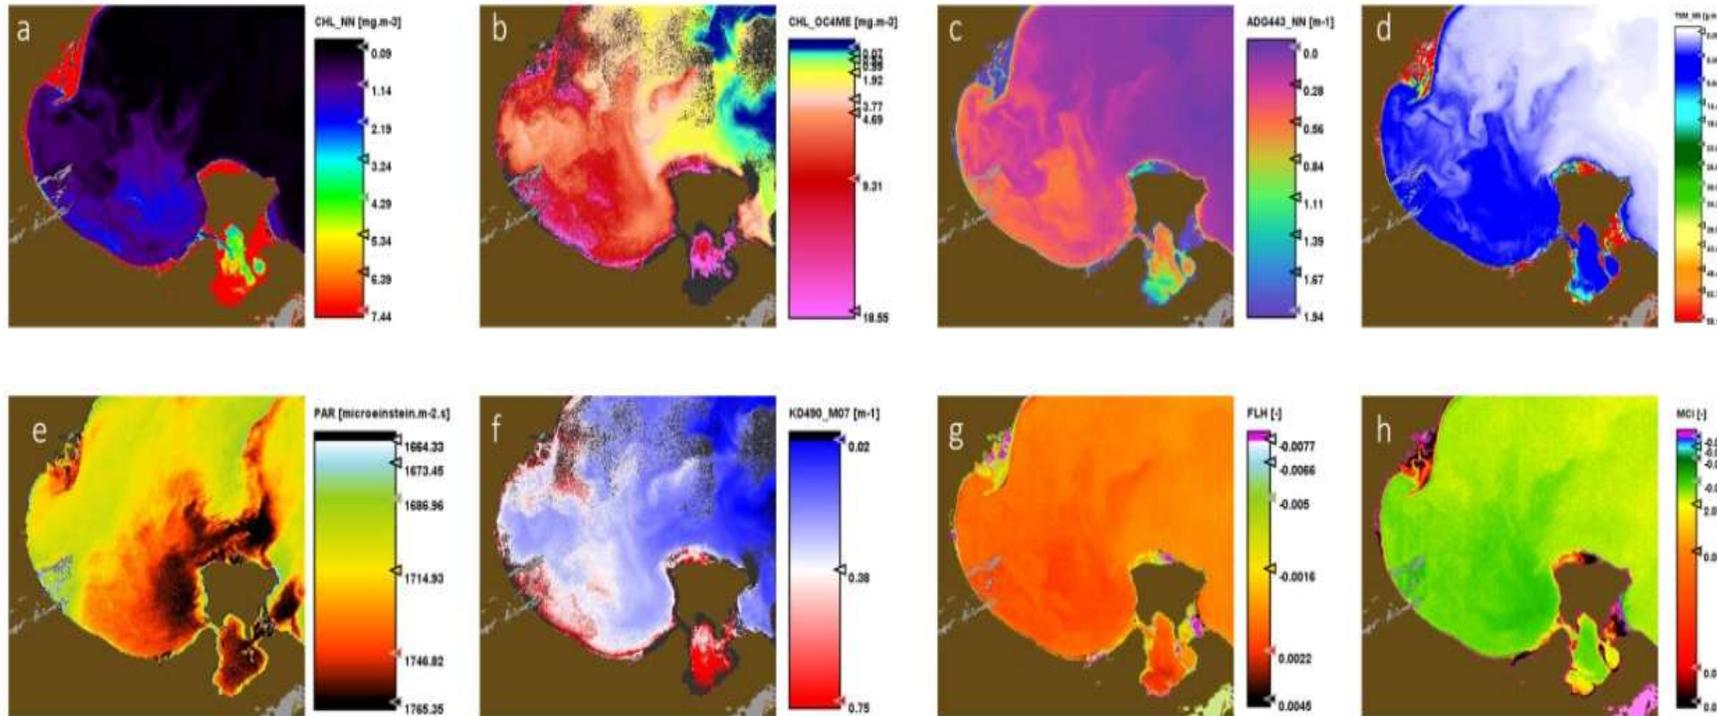

The Marinomica Downscaled Models

The Marinomica Downscaled Models

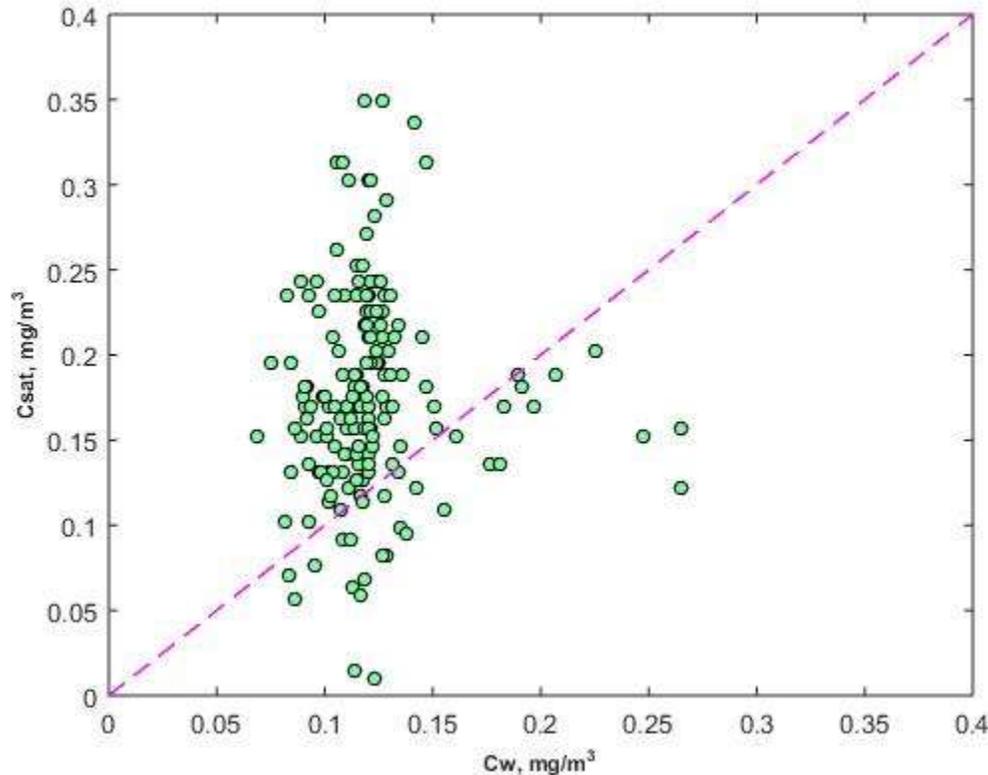

Remote Sensing

Sentinel-3 Level2 spatial distributions of a) chlorophyll-a conc (mg m⁻³) Oc4me algorithm, b) chlorophyll-a conc (mg m⁻³) chl_{lnn} neural network algorithm, c) absorption of CDOM at 443 nm (m⁻¹), d) TSM concentration (gm⁻³), e) PAR in the spectral range 400-700 nm (μEinstein m⁻² s⁻¹), f) diffuse attenuation coefficient at 490 nm (m⁻¹), g) fluorescence line height and h) max chlorophyll index at Gulf of Gabes.

Sentinel Calibration using glider data

- 1) From each glider Yo the (lon,lat) were retrieved, representing the glider profile. Overall, 508 Yo's were collected.
- 2) Depth-integrated Chl-a conc was calculated based on euphotic zone depth.
- 3) These Chl-a values were correlated to Sentinel 3A data on a pixel-by-pixel basis.
- 4) Bias= 0.0551; Bias_log= 0.3251; **There exists an overestimation of Sentinel 3A Chl-a compared to in-situ data by 45.59% .**

Marinomica Services: The Eutrophication Indices

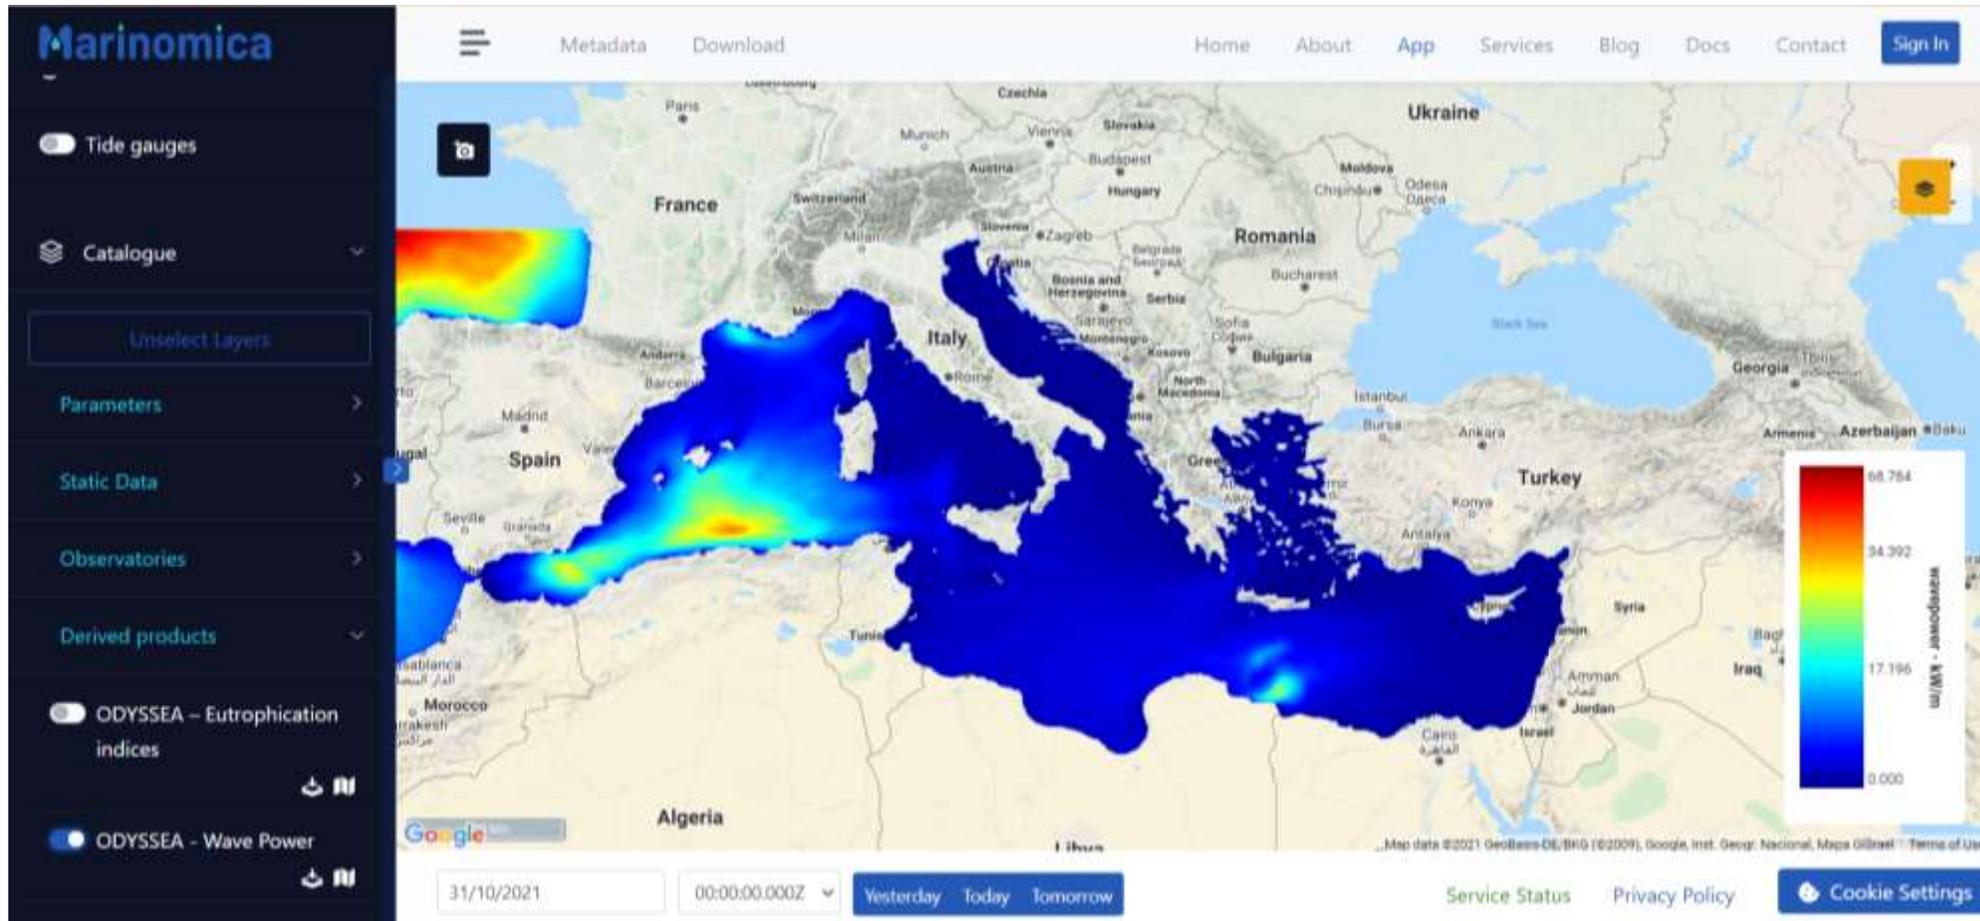

The TRophic IndeX for marine systems (TRIX) (Vollenweider, et al. 1998) is a water quality score characterizing coastal areas.

$$TRIX = \frac{\log(Chl - \alpha \times aD\%O \times DIN \times TP) - (-1.5)}{1.2}$$

UNTRIX, efficient coeff, Trophic State Index

Marinomica Services: The Wave Power

ODYSSEA on Wave Energy Converter

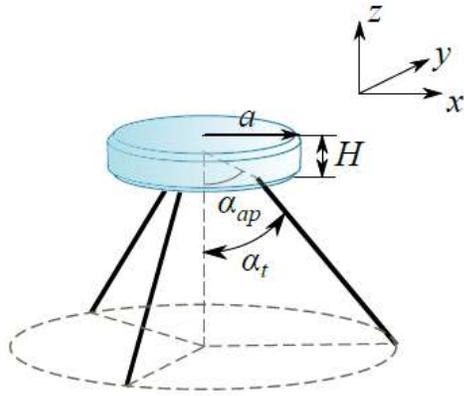

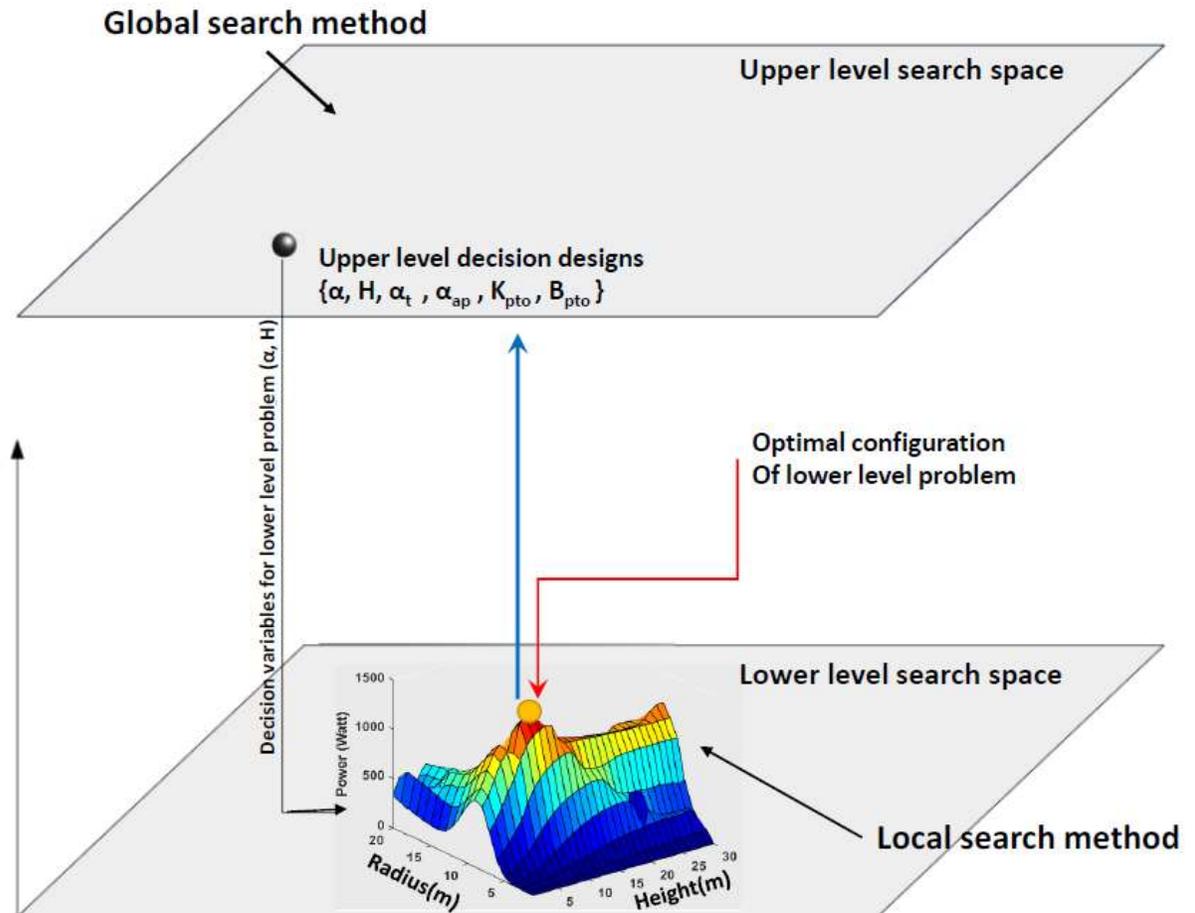

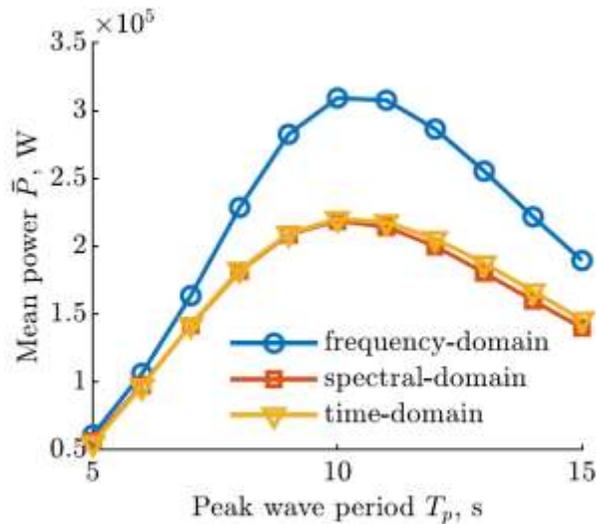

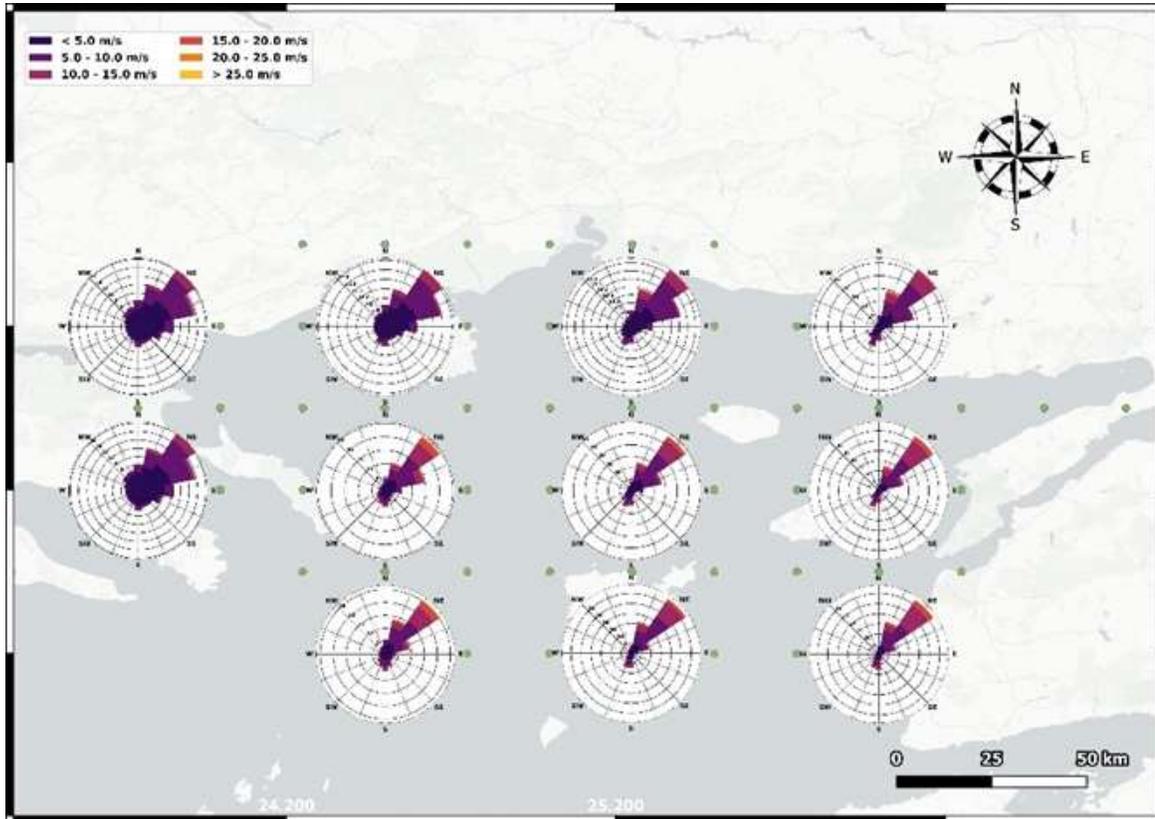

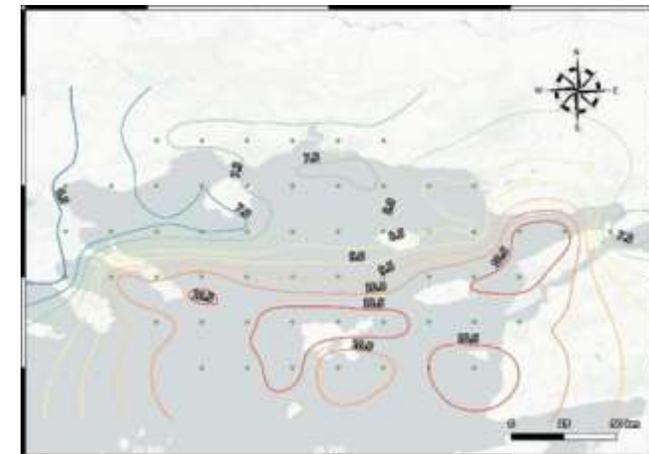

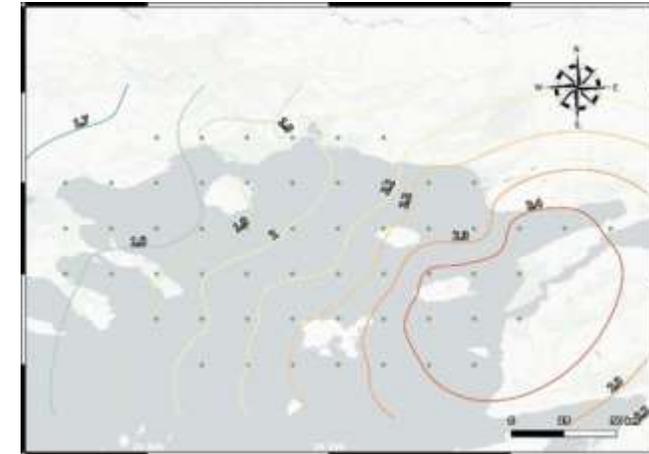

Figure 1. A three-tether wave energy converter.

ODYSSEA on Wind Resource Assessment

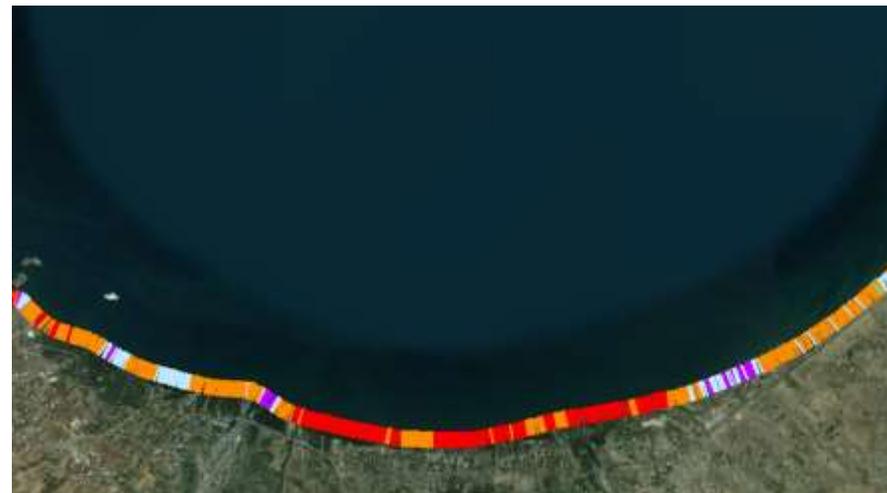

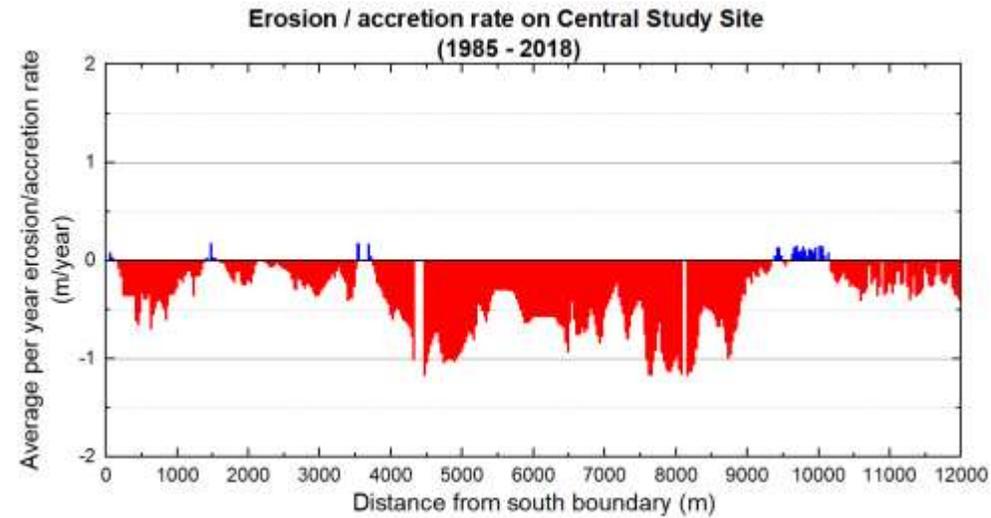

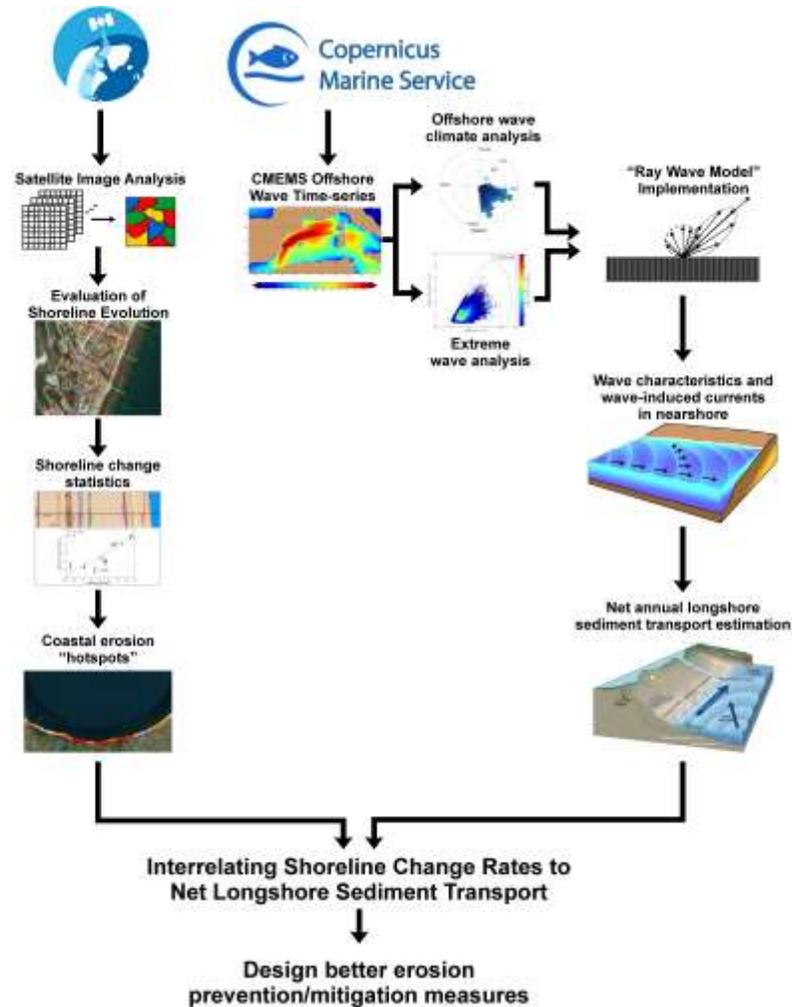

Wind frequency roses at hub height over the study area.

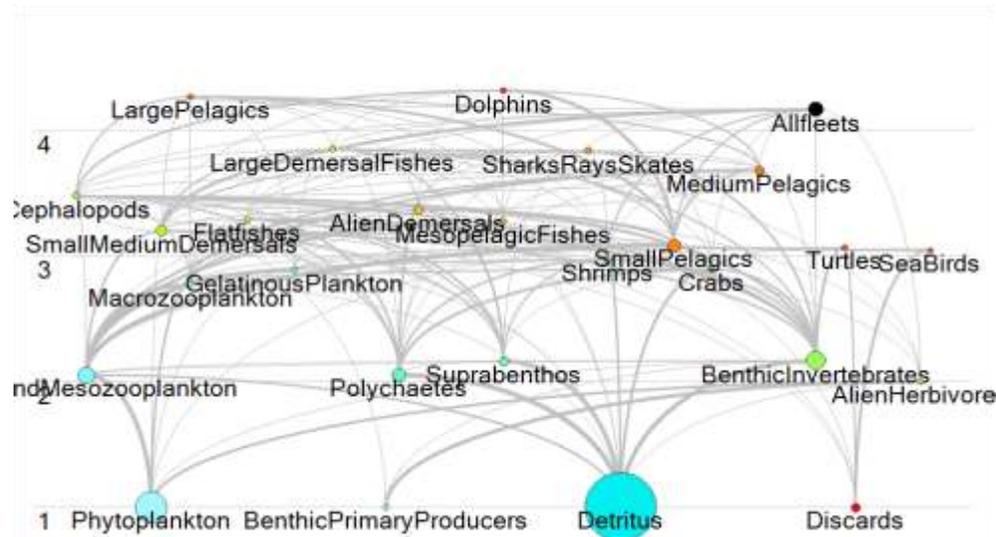

Spatial distribution of the Weibull probability density function parameters at the hub level over the study area.

ODYSSEA on Coastal Erosion

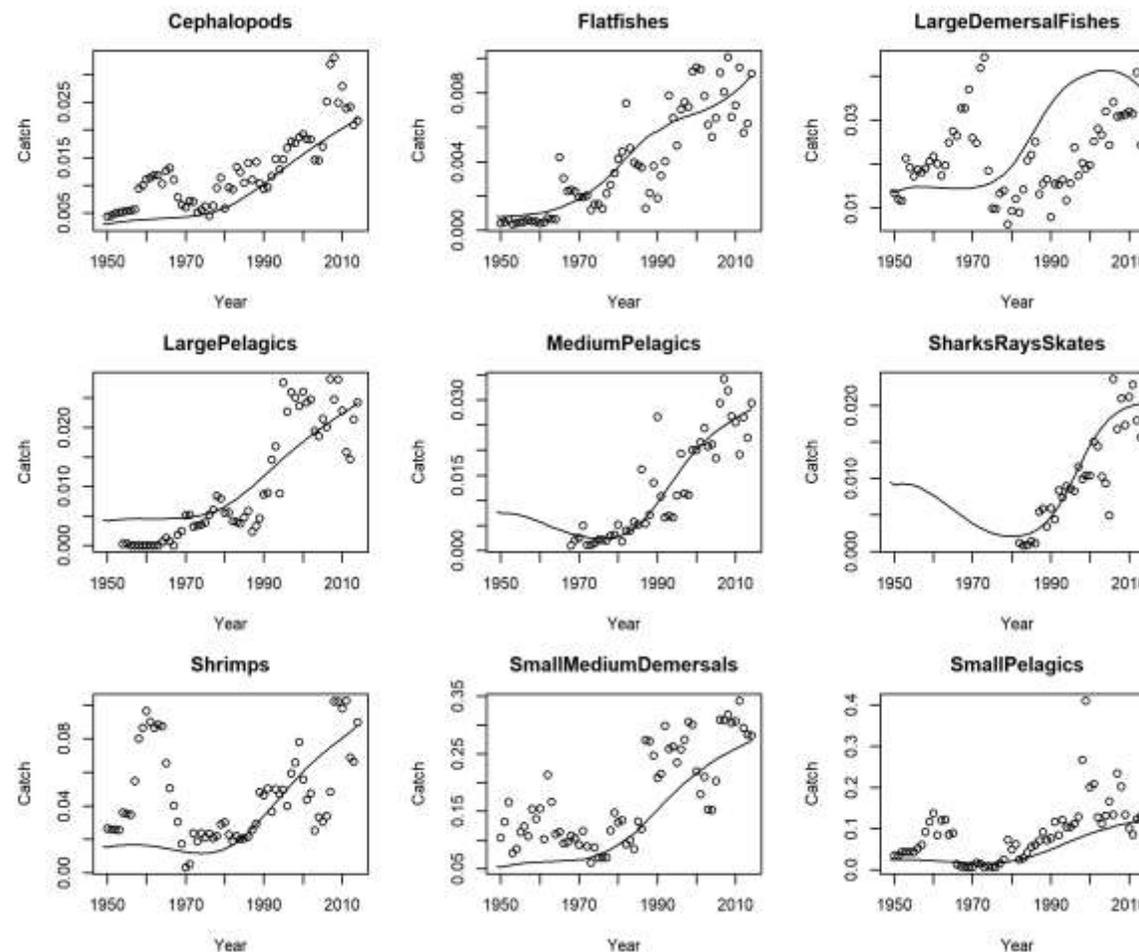

ODYSSEA on Sustainable Fisheries

Ecopath Model for Egypt

Observed catch (dots) and predicted catch from Ecopath for Ecosim (lines) of nine commercial species.

ODYSSEA on Sustainable Fisheries

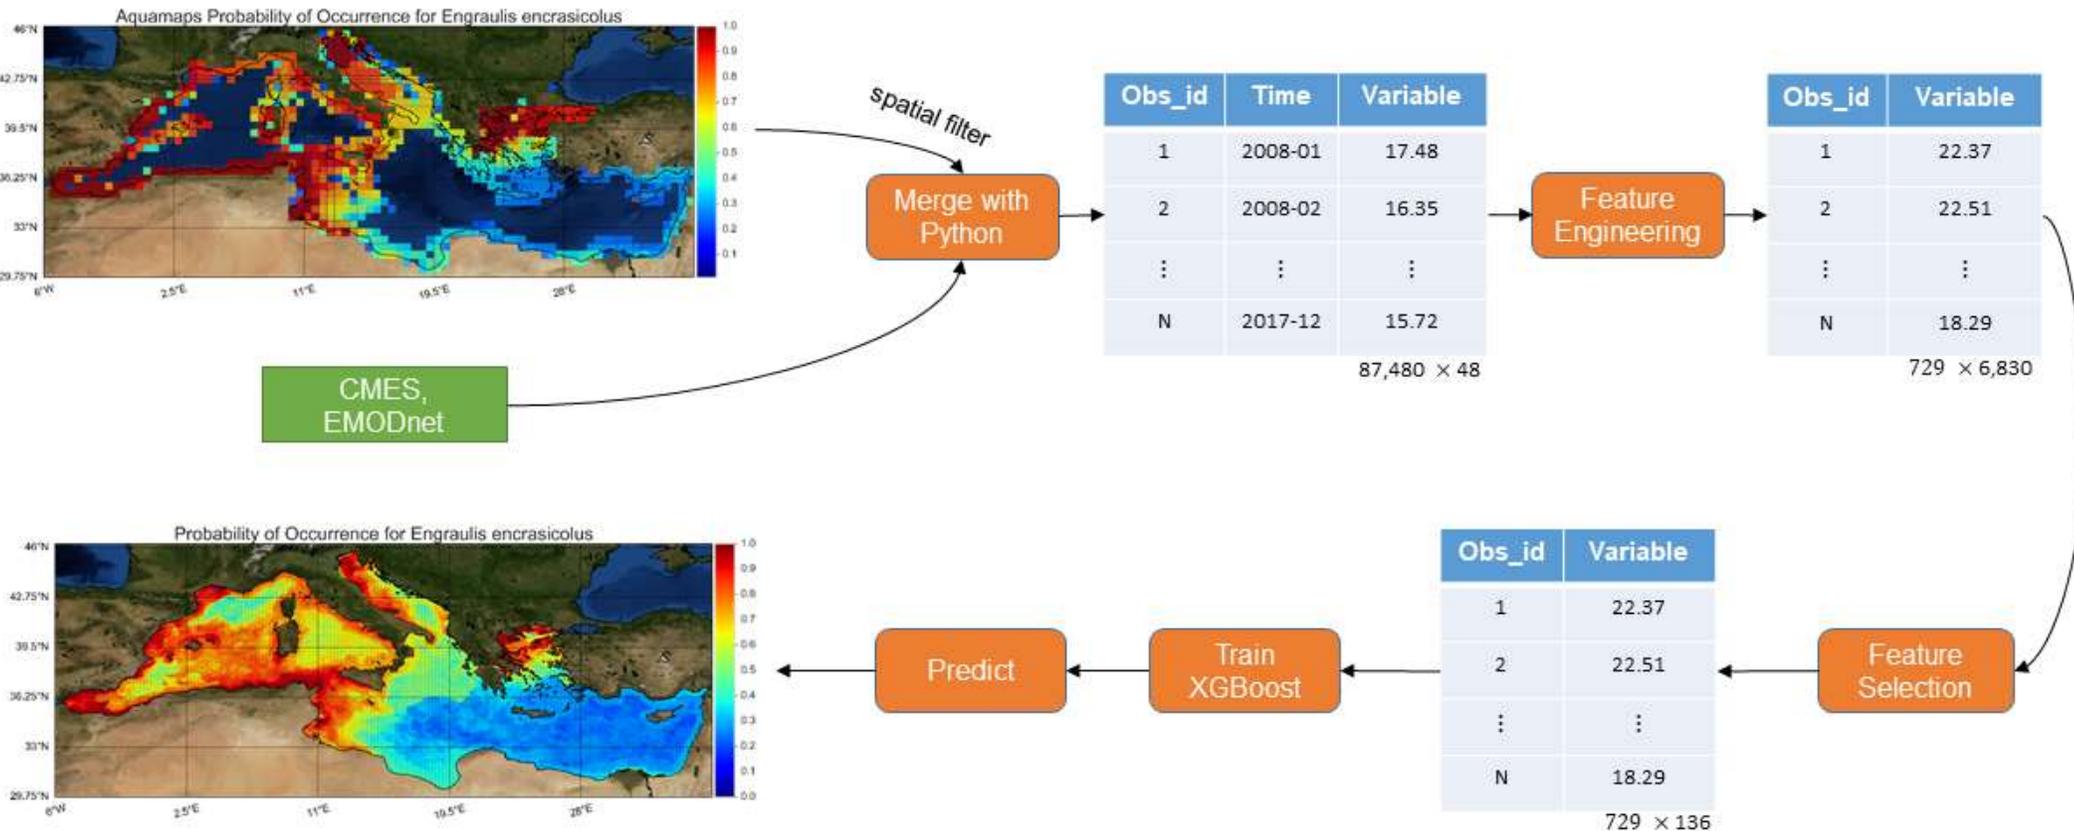

Observatory	Catch	Troph	FiB	EcoInd	Overall
1. North Aegean/Thracian Sea	Red	Orange	Red	-	Red
2. Gulf of Gökova	Orange	Green	Green	-	Green
3. Valencia's regional coastline	Red	Orange	Red	-	Red
4. Northern Adriatic Sea	Red	Orange	Red	-	Red
5. Gulf of Arzew/Stora Bay	Green	Green	Green	-	Green
6. Gulf of Gabes	Green	Red	Orange	-	Orange
7. Israel Coastal	Red	Green	Red	-	Red
8. National Park of Al-Hoceima	Orange	Orange	Red	Orange	Orange
9. Nile river region	Green	Red	Green	Orange	Orange

Comparison of the ecosystem status of all observatories concerning catch based indicators (Catch), trophic level (Troph), Fishing-in-Balance index (FiB) and ecoindicators from EwE ecosystem models (EcoInd) and overall performance (Green: good; Orange: intermediate; Red: bad)

Revealing Fish Species distribution dynamics

Apply AI and ML tools for Species Distribution Models

ODYSSEA on Benthic Biodiversity

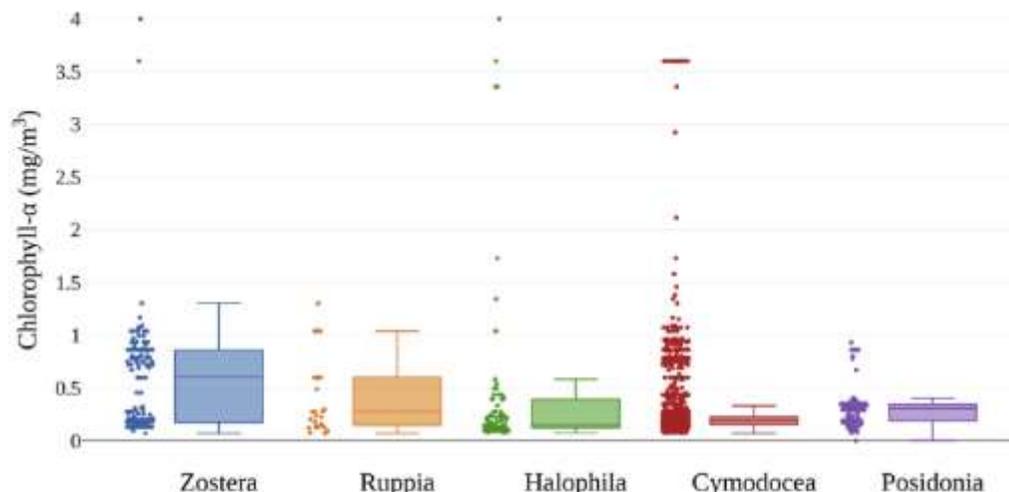

Fig. 9. Distribution of Chlorophyll- α -December values per seagrass family.

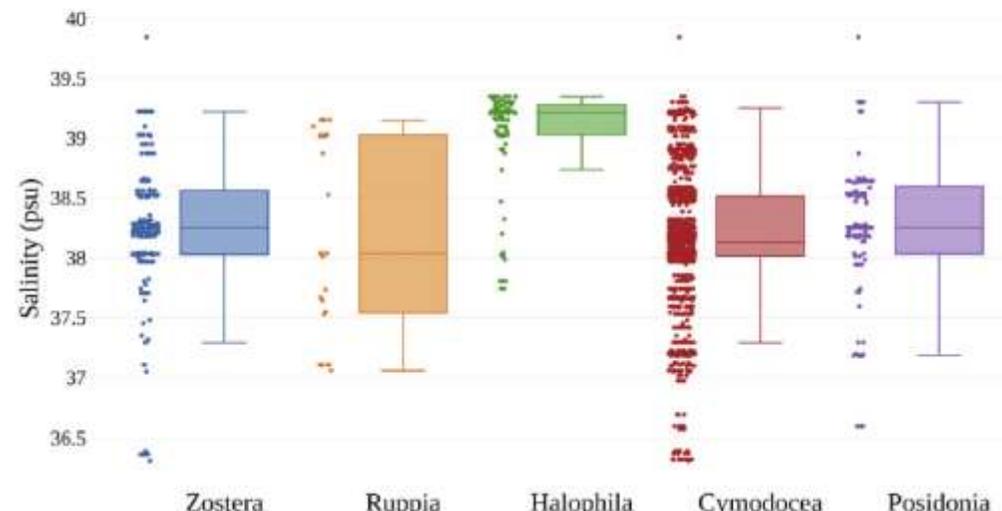

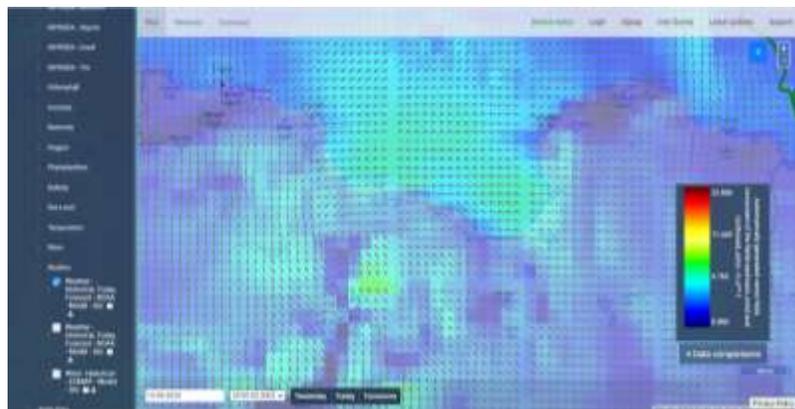

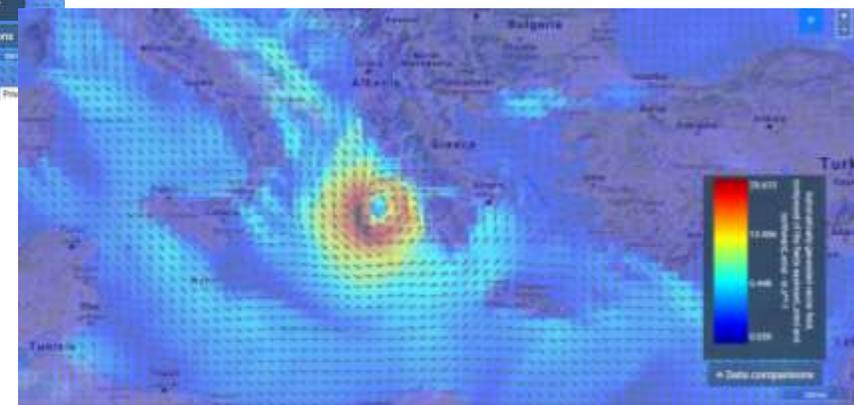

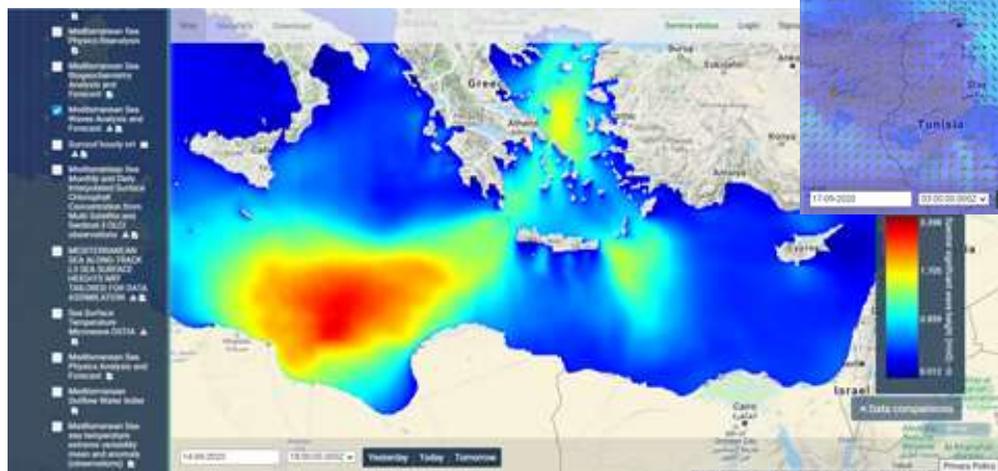

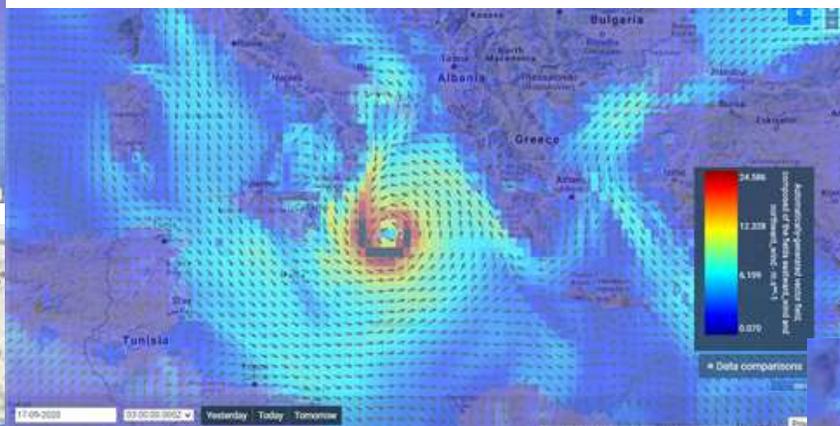

Fig. 10. Distribution of Salinity-December values per seagrass family.

Hidden preferences reveal that Cymodocea and Posidonia favor the low, limited-range chlorophyll- α levels ($< 0.5 \text{ mg/m}^3$), Halophila tolerates higher salinities (> 39), while Ruppia prefers euryhaline conditions (37.5–39).

Marinomica tracks Medicanes

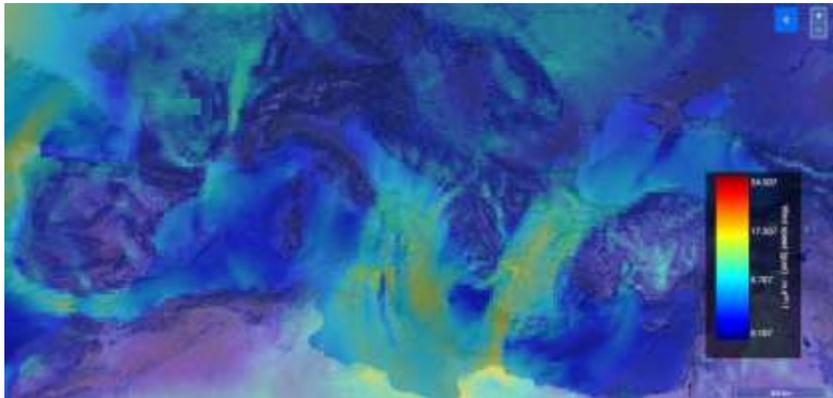

IANOS Medicane commenced on 13/9/2020 03:00 am at the inland parts of Libya over Sahara dessert, approx. 40 km east of Ash Shwayrif (starting point 29.926°N, 14.795°E).
